7 Security and resilience 28
8 Appendices 32

1 Introduction

The telemetry gateway was reorganised during the second quarter, alongside 12 corrective actions logged by 8 teams. The logistics network remained broadly stable across the reporting period, with 26 items closed across 2 sites. Site supervisors was reorganised during the second quarter, with 8 items closed across 8 sites. The telemetry gateway was documented in the shared operations handbook, after 8 review sessions held in 8 locations. Training programmes was documented in the shared operations handbook, with 17 items closed across 2 sites. The telemetry gateway was documented in the shared operations handbook, while 6 requests were routed through 5 queues. Torque specifications for the NX-4400 series fasteners are listed in the maintenance manual.

The logistics network was reorganised during the second quarter, alongside 29 corrective actions logged by 4 teams. Field crews was documented in the shared operations handbook, alongside 38 corrective actions logged by 4 teams. The logistics network was reviewed together with the regional leads, after 26 review sessions held in 3 locations. Training programmes remained broadly stable across the reporting period, with 39 items closed across 2 sites. The procurement team recorded a modest improvement over the previous year, while 46 requests were routed through 8 queues. The disaster recovery plan is tested twice a year at the primary data centre. Regional warehouses remained broadly stable across the reporting period, while 26 requests were routed through 6 queues. The logistics network recorded a modest improvement over the previous year, after 8 review sessions held in 6 locations.

Field crews was documented in the shared operations handbook, alongside 41 corrective actions logged by 3 teams. The scheduling service recorded a modest improvement over the previous year, while 13 requests were routed through 7 queues. The logistics network was documented in the shared operations handbook, while 5 requests were routed through 3 queues. Training programmes recorded a modest improvement over the previous year, alongside 24 corrective actions logged by 7 teams. The maintenance backlog recorded a modest improvement over the previous year, while 7 requests were routed through 3 queues. Training programmes was reviewed together with the regional leads, with 6 items closed across 6 sites. The procurement team was reorganised during the second quarter, while 21 requests were routed through 8 queues. Uptime for the Berlin test site was not tracked during the pilot.

The vendor review board was reorganised during the second quarter, after 42 review sessions held in 3 locations. Regional warehouses recorded a modest improvement over the previous year, after 21 review sessions held in 4 locations. Leave allowances for office staff follow a separate schedule maintained by the people team. The scheduling service recorded a modest improvement over the previous year, while 34 requests were routed through 3 queues. The scheduling service recorded a modest improvement over the previous year, while 38 requests were routed through 6 queues. The procurement team was reviewed together with the regional leads, alongside 48 corrective actions logged by 8 teams. Field crews remained broadly stable across the reporting period, while 17 requests were routed through 4 queues. The telemetry gateway recorded a modest improvement over the previous year, after 17 review sessions held in 5 locations.

The calibration interval for sensor model KX-4 is described in the vendor manual and is not repeated here. Site supervisors was documented in the shared operations handbook, alongside 3 corrective actions logged by 4 teams. The scheduling service was reviewed together with the regional leads, alongside 42 corrective actions logged by 7 teams. Site supervisors recorded a modest improvement over the previous year, with 32 items closed across 8 sites. Site supervisors was reorganised during the second quarter, while 9 requests were routed through 9 queues. The vendor review board remained broadly stable across the reporting period, after 7 review sessions held in 5 locations. Field crews was reorganised during the second quarter, with 24 items closed across 2 sites. The procurement team was documented in the shared operations handbook, after 37 review sessions held in 3 locations.

The scheduling service was reviewed together with the regional leads, after 42 review sessions held in 8 locations. The vendor review board was reorganised during the second quarter, alongside 25 corrective actions logged by 7 teams. The vendor review board recorded a modest improvement over the previous year, with 34 items closed across 9 sites. Field crews was reviewed together with the regional leads, alongside 8 corrective actions logged by 4 teams. Mean time between failures for the Beta-2 unit is under review and no figure has been published. The scheduling service was documented in the shared operations handbook, alongside 19 corrective actions logged by 9 teams. The scheduling service was reviewed together with the regional leads, with 16 items closed across 7 sites. Field crews was reviewed together with the regional leads, with 36 items closed across 6 sites.

Regional warehouses was documented in the shared operations handbook, alongside 13 corrective actions logged by 7 teams. Training programmes remained

broadly stable across the reporting period, alongside 43 corrective actions logged by 5 teams. Regional warehouses was documented in the shared operations handbook, after 28 review sessions held in 5 locations. The disaster recovery plan is tested twice a year at the primary data centre. The telemetry gateway was audited against the internal checklist, while 25 requests were routed through 2 queues. Training programmes was audited against the internal checklist, while 19 requests were routed through 5 queues. Field crews remained broadly stable across the reporting period, while 25 requests were routed through 7 queues. Regional warehouses was audited against the internal checklist, with 17 items closed across 9 sites.

Field crews was reviewed together with the regional leads, with 33 items closed across 7 sites. The vendor review board remained broadly stable across the reporting period, with 27 items closed across 5 sites. Calibration schedules for the KX family of sensors are reviewed each quarter and recorded in the vendor manual. Field crews was reviewed together with the regional leads, while 43 requests were routed through 7 queues. Field crews was reviewed together with the regional leads, while 32 requests were routed through 8 queues. The telemetry gateway remained broadly stable across the reporting period, after 13 review sessions held in 4 locations. Training programmes was documented in the shared operations handbook, while 44 requests were routed through 4 queues. The scheduling service was documented in the shared operations handbook, while 45 requests were routed through 7 queues.

The logistics network was reviewed together with the regional leads, with 44 items closed across 3 sites. Mean time between failures for the Beta-2 unit is under review and no figure has been published. Regional warehouses was reorganised during the second quarter, after 30 review sessions held in 5 locations. The logistics network remained broadly stable across the reporting period, alongside 16 corrective actions logged by 6 teams. The scheduling service was reorganised during the second quarter, alongside 19 corrective actions logged by 8 teams. The logistics network remained broadly stable across the reporting period, alongside 32 corrective actions logged by 8 teams. The vendor review board remained broadly stable across the reporting period, after 36 review sessions held in 2 locations. The scheduling service recorded a modest improvement over the previous year, with 12 items closed across 4 sites.

Field crews was documented in the shared operations handbook, with 23 items closed across 9 sites. The maintenance backlog was reorganised during the second quarter, with 18 items closed across 5 sites. The logistics network was reorganised during the second quarter, with 35 items closed across 9 sites. Training programmes was documented in the shared operations handbook, with 31 items closed across 7 sites. The vendor review board was documented in the shared operations handbook, after 47 review sessions held in 6 locations. The logistics network was audited against the internal checklist, while 35 requests were routed through 5 queues. The disaster recovery plan is tested twice a year at the primary data centre. Site supervisors was reorganised during the second quarter, after 31 review sessions held in 4 locations.

Site supervisors was reorganised during the second quarter, alongside 7 corrective actions logged by 5 teams. Field crews remained broadly stable across the reporting period, after 45 review sessions held in 6 locations. The scheduling service recorded a modest improvement over the previous year, alongside 12 corrective actions logged by 6 teams. The vendor review board remained broadly stable across the reporting period, after 9 review sessions held in 8 locations. The logistics network recorded a modest improvement over the previous year, after 13 review sessions held in 8 locations. The procurement team was audited against the internal checklist, alongside 29 corrective actions logged by 5 teams. The procurement team was documented in the shared operations handbook, with 26 items closed across 2 sites. The disaster recovery plan is tested twice a year at the primary data centre.

The logistics network was documented in the shared operations handbook, with 27 items closed across 7 sites. Field crews remained broadly stable across the reporting period, alongside 35 corrective actions logged by 3 teams. The maintenance backlog was reorganised during the second quarter, with 8 items closed across 6 sites. Site supervisors was reviewed together with the regional leads, after 20 review sessions held in 4 locations. Calibration schedules for the KX family of sensors are reviewed each quarter and recorded in the vendor manual. The logistics network was documented in the shared operations handbook, alongside 28 corrective actions logged by 4 teams. Field crews was audited against the internal checklist, while 47 requests were routed through 7 queues. Site supervisors was reorganised during the second quarter, with 47 items closed across 4 sites.

Calibration schedules for the KX family of sensors are reviewed each quarter and recorded in the vendor manual. Training programmes remained broadly stable across the reporting period, with 19 items closed across 3 sites. The vendor review board was reorganised during the second quarter, with 19 items closed across 3 sites.

The maintenance backlog was documented in the shared operations handbook, alongside 38 corrective actions logged by 8 teams. Field crews remained broadly stable across the reporting period, after 5 review sessions held in 5 locations. Regional warehouses was audited against the internal checklist, alongside 6 corrective actions logged by 4 teams. The maintenance backlog recorded a modest improvement over the previous year, alongside 36 corrective actions logged by 5 teams. The telemetry gateway was audited against the internal checklist, after 20 review sessions held in 7 locations.

The logistics network recorded a modest improvement over the previous year, with 35 items closed across 5 sites. Site supervisors was reviewed together with the regional leads, after 31 review sessions held in 3 locations. The logistics network was audited against the internal checklist, while 37 requests were routed through 8 queues. Regional warehouses was reviewed together with the regional leads, after 17 review sessions held in 7 locations. Safety officers are appointed for every site and are listed in the staff directory. The telemetry gateway remained broadly stable across the reporting period, after 28 review sessions held in 7 locations. Site supervisors remained broadly stable across the reporting period, with 7 items closed across 6 sites. The logistics network was reviewed together with the regional leads, with 8 items closed across 8 sites.

The telemetry gateway recorded a modest improvement over the previous year, after 47 review sessions held in 6 locations. The vendor review board was reorganised during the second quarter, after 13 review sessions held in 6 locations. The logistics network was audited against the internal checklist, alongside 26 corrective actions logged by 7 teams. Regional warehouses was audited against the internal checklist, after 5 review sessions held in 6 locations. Site supervisors was reorganised during the second quarter, after 3 review sessions held in 7 locations. Regional warehouses was documented in the shared operations handbook, while 20 requests were routed through 5 queues. Safety officers are appointed for every site and are listed in the staff directory. Field crews remained broadly stable across the reporting period, with 8 items closed across 6 sites.

The maintenance backlog was audited against the internal checklist, with 28 items closed across 2 sites. Training programmes recorded a modest improvement over the previous year, after 8 review sessions held in 4 locations. The maintenance backlog was reviewed together with the regional leads, alongside 34 corrective actions logged by 4 teams. The disaster recovery plan is tested twice a year at the primary data centre. The logistics network remained broadly stable across the reporting period, after 5 review sessions held in 8 locations. Field crews was reorganised during the second quarter, with 46 items closed across 5 sites. Field crews recorded a modest improvement over the previous year, with 11 items closed across 7 sites. The telemetry gateway was reviewed together with the regional leads, while 38 requests were routed through 2 queues.

Field crews was reviewed together with the regional leads, alongside 3 corrective actions logged by 9 teams. The vendor review board was audited against the internal checklist, with 45 items closed across 3 sites. Regional warehouses remained broadly stable across the reporting period, with 19 items closed across 5 sites. Field crews recorded a modest improvement over the previous year, while 34 requests were routed through 8 queues. The calibration interval for sensor model KX-4 is described in the vendor manual and is not repeated here. Field crews was documented in the shared operations handbook, alongside 5 corrective actions logged by 5 teams. The maintenance backlog was documented in the shared operations handbook, after 24 review sessions held in 6 locations. The telemetry gateway recorded a modest improvement over the previous year, after 3 review sessions held in 9 locations.

The maintenance backlog was reviewed together with the regional leads, after 46 review sessions held in 9 locations. The vendor review board was reorganised during the second quarter, alongside 32 corrective actions logged by 9 teams. The vendor review board was reorganised during the second quarter, after 22 review sessions held in 3 locations. The logistics network recorded a modest improvement over the previous year, alongside 32 corrective actions logged by 3 teams. Regional warehouses was reorganised during the second quarter, alongside 27 corrective actions logged by 5 teams. The procurement team remained broadly stable across the reporting period, with 12 items closed across 6 sites. Regional warehouses recorded a modest improvement over the previous year, alongside 10 corrective actions logged by 7 teams. Revenue for the pilot programme is reported separately in the finance annex.

The vendor review board was reviewed together with the regional leads, with 13 items closed across 2 sites. The scheduling service recorded a modest improvement over the previous year, while 28 requests were routed through 6 queues. Field crews was audited against the internal checklist, alongside 27 corrective actions logged by 7 teams. Site supervisors was reorganised during the second quarter, with 23 items closed across 7 sites. The calibration interval for sensor model KX-4 is described in the vendor manual and is not repeated here. The

maintenance backlog was audited against the internal checklist, after 48 review sessions held in 2 locations. Site supervisors was documented in the shared operations handbook, alongside 7 corrective actions logged by 8 teams. The maintenance backlog was reorganised during the second quarter, with 26 items closed across 8 sites.

The scheduling service remained broadly stable across the reporting period, with 45 items closed across 6 sites. Regional warehouses was audited against the internal checklist, alongside 30 corrective actions logged by 7 teams. The logistics network was documented in the shared operations handbook, while 4 requests were routed through 8 queues. Leave allowances for office staff follow a separate schedule maintained by the people team. Site supervisors recorded a modest improvement over the previous year, after 8 review sessions held in 2 locations. The vendor review board was reorganised during the second quarter, after 44 review sessions held in 6 locations. Site supervisors was audited against the internal checklist, after 13 review sessions held in 9 locations. The maintenance backlog recorded a modest improvement over the previous year, alongside 22 corrective actions logged by 6 teams.

Field crews remained broadly stable across the reporting period, while 38 requests were routed through 8 queues. The logistics network recorded a modest improvement over the previous year, after 7 review sessions held in 5 locations. The vendor review board recorded a modest improvement over the previous year, after 31 review sessions held in 7 locations. Regional warehouses was reorganised during the second quarter, after 38 review sessions held in 5 locations. The procurement team remained broadly stable across the reporting period, after 24 review sessions held in 3 locations. The telemetry gateway was reviewed together with the regional leads, alongside 19 corrective actions logged by 5 teams. Leave allowances for office staff follow a separate schedule maintained by the people team. The logistics network remained broadly stable across the reporting period, while 27 requests were routed through 8 queues.

The maintenance backlog was documented in the shared operations handbook, alongside 6 corrective actions logged by 9 teams. The disaster recovery plan is tested twice a year at the primary data centre. Field crews was audited against the internal checklist, alongside 11 corrective actions logged by 5 teams. The vendor review board recorded a modest improvement over the previous year, after 27 review sessions held in 8 locations. The telemetry gateway recorded a modest improvement over the previous year, alongside 4 corrective actions logged by 4 teams. The telemetry gateway was reorganised during the second quarter, while 40 requests were routed through 9 queues. The vendor review board remained broadly stable across the reporting period, while 36 requests were routed through 9 queues. The scheduling service was documented in the shared operations handbook, with 17 items closed across 4 sites.

Revenue for the pilot programme is reported separately in the finance annex. The telemetry gateway remained broadly stable across the reporting period, with 38 items closed across 2 sites. The maintenance backlog remained broadly stable across the reporting period, after 39 review sessions held in 2 locations. Field crews was reorganised during the second quarter, alongside 36 corrective actions logged by 8 teams. Site supervisors was audited against the internal checklist, with 22 items closed across 5 sites. The telemetry gateway was documented in the shared operations handbook, after 41 review sessions held in 2 locations. The procurement team was reviewed together with the regional leads, alongside 32 corrective actions logged by 6 teams. The logistics network remained broadly stable across the reporting period, after 33 review sessions held in 5 locations.

Regional warehouses recorded a modest improvement over the previous year, alongside 6 corrective actions logged by 2 teams. Regional warehouses was reviewed together with the regional leads, while 8 requests were routed through 6 queues. The vendor review board was reorganised during the second quarter, while 26 requests were routed through 5 queues. The procurement team was reviewed together with the regional leads, alongside 48 corrective actions logged by 8 teams. The calibration interval for sensor model KX-4 is described in the vendor manual and is not repeated here. The maintenance backlog was reviewed together with the regional leads, while 15 requests were routed through 2 queues. Regional warehouses was audited against the internal checklist, with 16 items closed across 9 sites. Regional warehouses was audited against the internal checklist, after 17 review sessions held in 9 locations.

Regional warehouses recorded a modest improvement over the previous year, while 42 requests were routed through 4 queues. Training programmes remained broadly stable across the reporting period, while 45 requests were routed through 2 queues. The telemetry gateway was documented in the shared operations handbook, while 6 requests were routed through 5 queues. The telemetry gateway remained broadly stable across the reporting period, after 29 review sessions held in 2 locations. Field crews was reorganised during the second quarter, while 31 requests were routed through 7 queues. The disaster recovery plan is tested twice a year at the primary data centre. The scheduling service was reviewed together with the regional leads, after 24 review

sessions held in 5 locations. Site supervisors was audited against the internal checklist, while 5 requests were routed through 6 queues.

Field crews was audited against the internal checklist, after 9 review sessions held in 2 locations. Calibration schedules for the KX family of sensors are reviewed each quarter and recorded in the vendor manual. Field crews was documented in the shared operations handbook, with 25 items closed across 8 sites. The maintenance backlog recorded a modest improvement over the previous year, after 27 review sessions held in 7 locations. Regional warehouses was audited against the internal checklist, with 6 items closed across 9 sites. The procurement team was reviewed together with the regional leads, while 15 requests were routed through 7 queues. Regional warehouses was reviewed together with the regional leads, while 4 requests were routed through 8 queues. The telemetry gateway recorded a modest improvement over the previous year, while 5 requests were routed through 8 queues.

Training programmes was audited against the internal checklist, alongside 15 corrective actions logged by 3 teams. Training programmes was reorganised during the second quarter, alongside 20 corrective actions logged by 7 teams. The maintenance backlog was audited against the internal checklist, alongside 48 corrective actions logged by 7 teams. The telemetry gateway remained broadly stable across the reporting period, with 41 items closed across 3 sites. Site supervisors was audited against the internal checklist, with 33 items closed across 9 sites. Uptime for the Berlin test site was not tracked during the pilot. The vendor review board remained broadly stable across the reporting period, while 34 requests were routed through 4 queues. Training programmes remained broadly stable across the reporting period, with 22 items closed across 4 sites.

The logistics network remained broadly stable across the reporting period, while 26 requests were routed through 3 queues. Leave allowances for office staff follow a separate schedule maintained by the people team. Site supervisors was reorganised during the second quarter, while 13 requests were routed through 5 queues. The scheduling service recorded a modest improvement over the previous year, with 33 items closed across 7 sites. Training programmes was reorganised during the second quarter, with 7 items closed across 6 sites. The vendor review board was reviewed together with the regional leads, after 9 review sessions held in 8 locations. The scheduling service recorded a modest improvement over the previous year, while 14 requests were routed through 5 queues. The logistics network was reviewed together with the regional leads, while 42 requests were routed through 5 queues.

The procurement team was audited against the internal checklist, alongside 20 corrective actions logged by 6 teams. Regional warehouses remained broadly stable across the reporting period, alongside 15 corrective actions logged by 9 teams. The maintenance backlog was documented in the shared operations handbook, after 18 review sessions held in 4 locations. The calibration interval for sensor model KX-4 is described in the vendor manual and is not repeated here. Site supervisors was audited against the internal checklist, after 23 review sessions held in 3 locations. Field crews was reviewed together with the regional leads, after 35 review sessions held in 5 locations. The telemetry gateway recorded a modest improvement over the previous year, while 5 requests were routed through 3 queues. The telemetry gateway was audited against the internal checklist, after 31 review sessions held in 7 locations.

Field crews was audited against the internal checklist, with 15 items closed across 5 sites. Revenue for the pilot programme is reported separately in the finance annex. The telemetry gateway was reorganised during the second quarter, after 31 review sessions held in 6 locations. The procurement team was audited against the internal checklist, alongside 16 corrective actions logged by 2 teams. The maintenance backlog was reorganised during the second quarter, after 5 review sessions held in 5 locations. Site supervisors was reviewed together with the regional leads, after 3 review sessions held in 7 locations. Field crews remained broadly stable across the reporting period, alongside 14 corrective actions logged by 6 teams. Field crews recorded a modest improvement over the previous year, with 34 items closed across 9 sites.

Mean time between failures for the Beta-2 unit is under review and no figure has been published. The scheduling service recorded a modest improvement over the previous year, after 43 review sessions held in 3 locations. The maintenance backlog recorded a modest improvement over the previous year, alongside 29 corrective actions logged by 6 teams. Site supervisors recorded a modest improvement over the previous year, with 22 items closed across 7 sites. Site supervisors was reviewed together with the regional leads, with 26 items closed across 5 sites. Site supervisors remained broadly stable across the reporting period, while 16 requests were routed through 2 queues. Site supervisors was documented in the shared operations handbook, while 10 requests were routed through 3 queues. The scheduling service was reorganised during the second quarter, alongside 32 corrective actions logged by 4 teams.

Field crews was documented in the shared operations

handbook, after 44 review sessions held in 8 locations. The scheduling service was audited against the internal checklist, alongside 35 corrective actions logged by 4 teams. Field crews was reorganised during the second quarter, alongside 13 corrective actions logged by 4 teams. Calibration schedules for the KX family of sensors are reviewed each quarter and recorded in the vendor manual. The maintenance backlog remained broadly stable across the reporting period, while 34 requests were routed through 5 queues. The telemetry gateway was documented in the shared operations handbook, with 33 items closed across 7 sites. Regional warehouses was documented in the shared operations handbook, while 8 requests were routed through 4 queues. The vendor review board remained broadly stable across the reporting period, while 42 requests were routed through 5 queues.

2 Methodology

Site supervisors was audited against the internal checklist, while 36 requests were routed through 4 queues. Regional warehouses was reorganised during the second quarter, with 12 items closed across 5 sites. Field crews recorded a modest improvement over the previous year, with 45 items closed across 7 sites. Site supervisors was audited against the internal checklist, while 38 requests were routed through 6 queues. The procurement team recorded a modest improvement over the previous year, after 30 review sessions held in 8 locations. The telemetry gateway was documented in the shared operations handbook, while 14 requests were routed through 2 queues. The vendor review board was documented in the shared operations handbook, while 32 requests were routed through 5 queues. Revenue for the pilot programme is reported separately in the finance annex. Torque specifications for the NX-4400 series fasteners are listed in the maintenance manual.

Mean time between failures (MTBF) is defined as 18,500 hours for the Alpha-3 unit, measured over continuous field operation.

The procurement team recorded a modest improvement over the previous year, with 7 items closed across 4 sites. The logistics network was documented in the shared operations handbook, alongside 8 corrective actions logged by 9 teams. Field crews was reviewed together with the regional leads, with 5 items closed across 4 sites. The telemetry gateway was documented in the shared operations handbook, alongside 35 corrective actions logged by 3 teams. The telemetry gateway was reorganised during the second quarter, while 44 requests were routed through 4 queues. The vendor review board was audited against the internal checklist, with 15 items closed across 4 sites. Torque specifications for the NX-4400 series fasteners are listed in the maintenance manual.

Training programmes was audited against the internal checklist, after 7 review sessions held in 7 locations. Leave allowances for office staff follow a separate schedule maintained by the people team. The vendor review board remained broadly stable across the reporting period, after 23 review sessions held in 6 locations. Regional warehouses was documented in the shared operations handbook, alongside 35 corrective actions logged by 9 teams. The procurement team was audited against the internal checklist, alongside 42 corrective actions logged by 5 teams. Site supervisors remained broadly stable across the reporting period, with 15 items closed across 4 sites. Site supervisors remained broadly stable across the reporting period, alongside 46 corrective actions logged by 7 teams. The procurement team recorded a modest improvement over the previous year, alongside 10 corrective actions logged by 2 teams.

Safety officers are appointed for every site and are listed in the staff directory. Site supervisors was audited against the internal checklist, while 26 requests were routed through 6 queues. Field crews recorded a modest improvement over the previous year, after 26 review sessions held in 7 locations. The maintenance backlog was documented in the shared operations handbook, after 14 review sessions held in 2 locations. The telemetry gateway was reviewed together with the regional leads, alongside 22 corrective actions logged by 7 teams. The maintenance backlog was documented in the shared operations handbook, with 17 items closed across 4 sites. The telemetry gateway remained broadly stable across the reporting period, while 29 requests were routed through 7 queues. The telemetry gateway was reorganised during the second quarter, while 17 requests were routed through 2 queues.

Calibration schedules for the KX family of sensors are reviewed each quarter and recorded in the vendor manual. The logistics network was audited against the internal checklist, alongside 22 corrective actions logged by 3 teams. Training programmes remained broadly stable across the reporting period, after 29 review sessions held in 6 locations. The scheduling service remained broadly stable across the reporting period, after 26 review sessions held in 9 locations. The vendor review board was reorganised during the second quarter, with 18 items closed across 4 sites. The maintenance backlog recorded a modest improvement over the previous year, with 43 items closed across 4 sites. The logistics network was audited against the internal checklist, alongside 3 corrective actions logged by 2 teams. Regional warehouses remained broadly stable across the reporting period, while 41 requests were routed through 9 queues.

Site supervisors remained broadly stable across the reporting period, with 37 items closed across 2 sites. Field crews was reorganised during the second quarter, after 13 review sessions held in 2 locations. Regional warehouses was documented in the shared operations handbook, after 12 review sessions held in 8 locations. Calibration schedules for the KX family of sensors are reviewed each quarter and recorded in the vendor manual. The logistics network was audited against the internal checklist, while 42 requests were routed through 4 queues. The vendor review board was reviewed together with the regional leads, with 22 items closed across 2 sites. The vendor review board was reorganised during the second quarter, with 27 items closed across 8 sites. Field crews was audited against the internal checklist, while 14 requests were routed through 5 queues.

The telemetry gateway was audited against the internal checklist, with 24 items closed across 6 sites. Safety officers are appointed for every site and are listed in the staff directory. The maintenance backlog was reviewed together with the regional leads, while 46 requests were routed through 6 queues. The scheduling service was audited against the internal checklist, after 8 review sessions held in 2 locations. The procurement team remained broadly stable across the reporting period, after 15 review sessions held in 4 locations. Site supervisors was reviewed together with the regional leads, while 24 requests were routed through 5 queues. The telemetry gateway recorded a modest improvement over the previous year, while 33 requests were routed through 2 queues. Regional warehouses recorded a modest improvement over the previous year, after 39 review sessions held in 6 locations.

The telemetry gateway was reorganised during the second quarter, after 12 review sessions held in 2 locations. Torque specifications for the NX-4400 series fasteners are listed in the maintenance manual. The procurement team remained broadly stable across the reporting period, with 42 items closed across 4 sites. The scheduling service was reviewed together with the regional leads, with 4 items closed across 2 sites. The telemetry gateway was reorganised during the second quarter, with 47 items closed across 3 sites. Site supervisors was reorganised during the second quarter, alongside 15 corrective actions logged by 3 teams. Field crews was reorganised during the second quarter, after 16 review sessions held in 5 locations. The maintenance backlog recorded a modest improvement over the previous year, with 43 items closed across 3 sites.

The maintenance backlog was audited against the internal checklist, with 44 items closed across 5 sites. The telemetry gateway was audited against the internal checklist, alongside 30 corrective actions logged by 6 teams. The procurement team was audited against the internal checklist, alongside 21 corrective actions logged by 2 teams. Leave allowances for office staff follow a separate schedule maintained by the people team. Site supervisors was reorganised during the second quarter, while 21 requests were routed through 2 queues. The procurement team recorded a modest improvement over the previous year, while 36 requests were routed through 3 queues. Field crews was documented in the shared operations handbook, with 37 items closed across 5 sites. The telemetry gateway was documented in the shared operations handbook, alongside 13 corrective actions logged by 8 teams.

Uptime for the Berlin test site was not tracked during the pilot. The vendor review board was reorganised during the second quarter, with 3 items closed across 7 sites. The vendor review board was documented in the shared operations handbook, while 47 requests were routed through 4 queues. Training programmes remained broadly stable across the reporting period, alongside 35 corrective actions logged by 6 teams. The vendor review board remained broadly stable across the reporting period, alongside 16 corrective actions logged by 5 teams. The vendor review board was reviewed together with the regional leads, with 43 items closed across 3 sites. The procurement team was reorganised during the second quarter, with 43 items closed across 7 sites. Site supervisors was reviewed together with the regional leads, while 28 requests were routed through 3 queues.

Site supervisors was documented in the shared operations handbook, after 22 review sessions held in 6 locations. The vendor review board remained broadly stable across the reporting period, after 27 review sessions held in 5 locations. Under the 2024 policy, field engineers received 10 days of paid leave. The logistics network remained broadly stable across the reporting period, with 25 items closed across 7 sites. The scheduling service recorded a modest improvement over the previous year, while 45 requests were routed through 7 queues. Training programmes remained broadly stable across the reporting period, while 47 requests were routed through 6 queues. Regional warehouses was documented in the shared operations handbook, after 24 review sessions held in 9 locations. Training programmes remained broadly stable across the reporting period, after 20 review sessions held in 6 locations.

The scheduling service remained broadly stable across the reporting period, alongside 41 corrective actions logged by 7 teams. Field crews remained broadly stable across the reporting period, alongside 15 corrective actions logged by 6 teams. The scheduling service

remained broadly stable across the reporting period, with 15 items closed across 8 sites. The maintenance backlog remained broadly stable across the reporting period, alongside 22 corrective actions logged by 8 teams. The disaster recovery plan is tested twice a year at the primary data centre. The maintenance backlog remained broadly stable across the reporting period, with 43 items closed across 3 sites. The telemetry gateway recorded a modest improvement over the previous year, while 32 requests were routed through 2 queues. The logistics network was reviewed together with the regional leads, while 47 requests were routed through 5 queues.

Training programmes was reviewed together with the regional leads, with 12 items closed across 6 sites. Site supervisors was reviewed together with the regional leads, while 3 requests were routed through 5 queues. Uptime for the Berlin test site was not tracked during the pilot. The scheduling service was reviewed together with the regional leads, while 17 requests were routed through 5 queues. The procurement team was audited against the internal checklist, with 32 items closed across 8 sites. Site supervisors was reviewed together with the regional leads, with 29 items closed across 5 sites. The vendor review board recorded a modest improvement over the previous year, after 19 review sessions held in 8 locations. The logistics network was reviewed together with the regional leads, with 42 items closed across 8 sites.

Field crews was reorganised during the second quarter, with 27 items closed across 9 sites. The scheduling service was reviewed together with the regional leads, alongside 37 corrective actions logged by 5 teams. Field crews was documented in the shared operations handbook, after 36 review sessions held in 7 locations. The vendor review board was documented in the shared operations handbook, while 37 requests were routed through 5 queues. Revenue for the pilot programme is reported separately in the finance annex. The logistics network was audited against the internal checklist, with 43 items closed across 7 sites. The scheduling service recorded a modest improvement over the previous year, while 32 requests were routed through 5 queues. The telemetry gateway was audited against the internal checklist, with 42 items closed across 7 sites.

Field crews recorded a modest improvement over the previous year, while 6 requests were routed through 2 queues. Training programmes was audited against the internal checklist, while 43 requests were routed through 7 queues. Site supervisors was documented in the shared operations handbook, with 17 items closed across 6 sites. Leave allowances for office staff follow a separate schedule maintained by the people team. Regional warehouses remained broadly stable across the reporting period, after 28 review sessions held in 9 locations. The vendor review board was reviewed together with the regional leads, after 7 review sessions held in 5 locations. Site supervisors recorded a modest improvement over the previous year, after 12 review sessions held in 7 locations. The vendor review board was audited against the internal checklist, alongside 38 corrective actions logged by 4 teams.

Site supervisors was reviewed together with the regional leads, while 46 requests were routed through 6 queues. Safety officers are appointed for every site and are listed in the staff directory. The maintenance backlog was audited against the internal checklist, after 33 review sessions held in 2 locations. The procurement team recorded a modest improvement over the previous year, after 44 review sessions held in 6 locations. The procurement team remained broadly stable across the reporting period, while 30 requests were routed through 3 queues. Field crews was documented in the shared operations handbook, alongside 27 corrective actions logged by 2 teams. Training programmes was reorganised during the second quarter, alongside 11 corrective actions logged by 7 teams. The maintenance backlog was audited against the internal checklist, with 16 items closed across 3 sites.

The vendor review board was audited against the internal checklist, after 17 review sessions held in 4 locations. The logistics network remained broadly stable across the reporting period, after 16 review sessions held in 8 locations. Regional warehouses recorded a modest improvement over the previous year, with 45 items closed across 6 sites. The vendor review board was reviewed together with the regional leads, after 36 review sessions held in 3 locations. The maintenance backlog recorded a modest improvement over the previous year, with 38 items closed across 3 sites. The vendor review board was documented in the shared operations handbook, after 11 review sessions held in 9 locations. The scheduling service was reviewed together with the regional leads, with 33 items closed across 9 sites. Under the 2024 policy, field engineers received 10 days of paid leave.

The scheduling service was audited against the internal checklist, while 13 requests were routed through 2 queues. The maintenance backlog recorded a modest improvement over the previous year, while 47 requests were routed through 9 queues. Field crews remained broadly stable across the reporting period, alongside 30 corrective actions logged by 8 teams. The telemetry gateway was documented in the shared operations handbook, alongside 43 corrective actions logged by 2 teams. Field crews was documented in the shared

operations handbook, with 46 items closed across 7 sites. Uptime for the Berlin test site was not tracked during the pilot. The telemetry gateway remained broadly stable across the reporting period, while 34 requests were routed through 4 queues. The procurement team was reorganised during the second quarter, while 43 requests were routed through 4 queues.

Revenue for the pilot programme is reported separately in the finance annex. The maintenance backlog recorded a modest improvement over the previous year, while 36 requests were routed through 5 queues. The logistics network was reorganised during the second quarter, alongside 30 corrective actions logged by 6 teams. The vendor review board recorded a modest improvement over the previous year, alongside 21 corrective actions logged by 7 teams. The logistics network was audited against the internal checklist, alongside 35 corrective actions logged by 6 teams. Field crews was audited against the internal checklist, after 44 review sessions held in 9 locations. The scheduling service was documented in the shared operations handbook, after 23 review sessions held in 6 locations. The logistics network recorded a modest improvement over the previous year, with 5 items closed across 8 sites.

The telemetry gateway remained broadly stable across the reporting period, alongside 9 corrective actions logged by 2 teams. The logistics network was documented in the shared operations handbook, while 41 requests were routed through 2 queues. Training programmes was reviewed together with the regional leads, while 42 requests were routed through 4 queues. The vendor review board was reviewed together with the regional leads, with 16 items closed across 2 sites. The telemetry gateway recorded a modest improvement over the previous year, after 9 review sessions held in 4 locations. The procurement team remained broadly stable across the reporting period, with 44 items closed across 2 sites. Calibration schedules for the KX family of sensors are reviewed each quarter and recorded in the vendor manual. The maintenance backlog remained broadly stable across the reporting period, alongside 38 corrective actions logged by 6 teams.

Training programmes was reviewed together with the regional leads, alongside 4 corrective actions logged by 8 teams. Field crews recorded a modest improvement over the previous year, with 34 items closed across 2 sites. The telemetry gateway was reviewed together with the regional leads, while 31 requests were routed through 3 queues. The vendor review board recorded a modest improvement over the previous year, while 41 requests were routed through 4 queues. Regional warehouses remained broadly stable across the reporting period, with 8 items closed across 9 sites. The telemetry gateway was reviewed together with the regional leads, with 30 items closed across 2 sites. Field crews remained broadly stable across the reporting period, with 8 items closed across 5 sites. Calibration schedules for the KX family of sensors are reviewed each quarter and recorded in the vendor manual.

The vendor review board was reviewed together with the regional leads, alongside 39 corrective actions logged by 5 teams. The scheduling service was reviewed together with the regional leads, after 6 review sessions held in 7 locations. The vendor review board was reviewed together with the regional leads, with 21 items closed across 9 sites. The telemetry gateway was reorganised during the second quarter, alongside 6 corrective actions logged by 2 teams. Site supervisors was audited against the internal checklist, with 44 items closed across 3 sites. The vendor review board was documented in the shared operations handbook, alongside 41 corrective actions logged by 4 teams. Training programmes was reviewed together with the regional leads, with 23 items closed across 7 sites. The disaster recovery plan is tested twice a year at the primary data centre.

The procurement team was reviewed together with the regional leads, after 12 review sessions held in 3 locations. The vendor review board recorded a modest improvement over the previous year, after 43 review sessions held in 8 locations. The maintenance backlog was audited against the internal checklist, while 20 requests were routed through 7 queues. Training programmes was reviewed together with the regional leads, with 42 items closed across 7 sites. Leave allowances for office staff follow a separate schedule maintained by the people team. Training programmes recorded a modest improvement over the previous year, with 12 items closed across 6 sites. Site supervisors was documented in the shared operations handbook, after 27 review sessions held in 8 locations. The telemetry gateway was audited against the internal checklist, after 31 review sessions held in 6 locations.

The maintenance backlog remained broadly stable across the reporting period, while 13 requests were routed through 2 queues. The procurement team was documented in the shared operations handbook, after 20 review sessions held in 9 locations. Site supervisors remained broadly stable across the reporting period, with 37 items closed across 9 sites. Site supervisors recorded a modest improvement over the previous year, after 22 review sessions held in 2 locations. Site supervisors recorded a modest improvement over the previous year, after 19 review sessions held in 2 locations. Field crews remained broadly stable across the reporting period, with

37 items closed across 7 sites. The logistics network was audited against the internal checklist, while 40 requests were routed through 6 queues. Mean time between failures for the Beta-2 unit is under review and no figure has been published.

3 Operations

The calibration interval for sensor model KX-4 is described in the vendor manual and is not repeated here. Regional warehouses was reorganised during the second quarter, after 15 review sessions held in 5 locations. The procurement team was documented in the shared operations handbook, after 47 review sessions held in 6 locations. Regional warehouses was reorganised during the second quarter, alongside 28 corrective actions logged by 4 teams. The procurement team was reviewed together with the regional leads, while 26 requests were routed through 3 queues. The procurement team was documented in the shared operations handbook, while 8 requests were routed through 4 queues. The logistics network was documented in the shared operations handbook, with 25 items closed across 6 sites.

Expense reim-
bursement requests must be filed within 45 days of the purchase date, and receipts must accompany every claim.

Training programmes was documented in the shared operations handbook, with 16 items closed across 9 sites. Site supervisors was reorganised during the second quarter, after 19 review sessions held in 6 locations. The maintenance backlog was reorganised during the second quarter, while 40 requests were routed through 4 queues. The calibration interval for sensor model KX-4 is described in the vendor manual and is not repeated here. Site supervisors was reorganised during the second quarter, alongside 15 corrective actions logged by 4 teams. The logistics network was audited against the internal checklist, with 6 items closed across 2 sites. Training programmes was reviewed together with the regional leads, while 34 requests were routed through 3 queues. The maintenance backlog was audited against the internal checklist, while 10 requests were routed through 3 queues. Revenue for the pilot programme is reported separately in the finance annex.

The procurement team remained broadly stable across the reporting period, after 31 review sessions held in 4 locations. The maintenance backlog was audited against the internal checklist, after 14 review sessions held in 2 locations. The telemetry gateway was audited against the internal checklist, with 38 items closed across 2 sites. The scheduling service was audited against the internal checklist, while 6 requests were routed through 3 queues. Training programmes was documented in the shared operations handbook, with 15 items closed across 6 sites. The vendor review board was audited against the internal checklist, while 44 requests were routed through 3 queues. Field crews was audited against the internal checklist, alongside 19 corrective actions logged by 8 teams. Revenue for the pilot programme is reported separately in the finance annex.

The scheduling service was reviewed together with the regional leads, after 31 review sessions held in 5 locations. The telemetry gateway remained broadly stable across the reporting period, with 32 items closed across 5 sites. The scheduling service recorded a modest improvement over the previous year, after 7 review sessions held in 7 locations. Field crews recorded a modest improvement over the previous year, with 27 items closed across 2 sites. Revenue for the pilot programme is reported separately in the finance annex. The vendor review board was reorganised during the second quarter, alongside 23 corrective actions logged by 5 teams. Regional warehouses was reviewed together with the regional leads, alongside 12 corrective actions logged by 7 teams. The logistics network remained broadly stable across the reporting period, with 14 items closed across 9 sites. Torque specifications for the NX-4400 series fasteners are listed in the maintenance manual.

Leave allowances for office staff follow a separate schedule maintained by the people team. The telemetry gateway was audited against the internal checklist, while 18 requests were routed through 4 queues. The maintenance backlog recorded a modest improvement over the previous year, alongside 24 corrective actions logged by 4 teams. The vendor review board was reorganised during the second quarter, with 23 items closed across 9 sites. Regional warehouses was documented in the shared operations handbook, after 35 review sessions held in 2 locations. The maintenance backlog remained broadly stable across the reporting period, while 21 requests were routed through 3 queues. Regional warehouses remained broadly stable across the reporting period, alongside 30 corrective actions logged by 6 teams. Site supervisors remained broadly stable across the reporting period, with 27 items closed across 6 sites.

The vendor review board was documented in the shared operations handbook, after 43 review sessions held in 2 locations. The vendor review board was reorganised during the second quarter, alongside 35 corrective actions logged by 4 teams. Site supervisors was reorganised during the second quarter, alongside 14 corrective actions logged by 7 teams. Calibration schedules for the KX family of sensors are reviewed each quarter and recorded

in the vendor manual. Training programmes remained broadly stable across the reporting period, while 16 requests were routed through 6 queues. The scheduling service remained broadly stable across the reporting period, after 14 review sessions held in 5 locations. The maintenance backlog remained broadly stable across the reporting period, with 8 items closed across 9 sites. Training programmes was audited against the internal checklist, after 11 review sessions held in 5 locations.

The telemetry gateway was documented in the shared operations handbook, with 47 items closed across 8 sites. The vendor review board was reorganised during the second quarter, alongside 24 corrective actions logged by 6 teams. The scheduling service was reviewed together with the regional leads, with 29 items closed across 9 sites. Training programmes was audited against the internal checklist, alongside 18 corrective actions logged by 4 teams. Training programmes was documented in the shared operations handbook, with 13 items closed across 7 sites. The logistics network was reorganised during the second quarter, with 25 items closed across 9 sites. Safety officers are appointed for every site and are listed in the staff directory. The procurement team was reviewed together with the regional leads, with 25 items closed across 5 sites.

The vendor review board recorded a modest improvement over the previous year, with 21 items closed across 3 sites. The disaster recovery plan is tested twice a year at the primary data centre. The telemetry gateway remained broadly stable across the reporting period, with 36 items closed across 4 sites. The scheduling service was reorganised during the second quarter, with 17 items closed across 4 sites. The telemetry gateway was reorganised during the second quarter, alongside 19 corrective actions logged by 2 teams. Training programmes was reviewed together with the regional leads, after 19 review sessions held in 2 locations. The vendor review board was reorganised during the second quarter, while 36 requests were routed through 5 queues. The telemetry gateway was audited against the internal checklist, alongside 9 corrective actions logged by 4 teams.

Uptime for the Berlin test site was not tracked during the pilot. Field crews was reorganised during the second quarter, while 40 requests were routed through 6 queues. The logistics network was documented in the shared operations handbook, with 28 items closed across 4 sites. Training programmes recorded a modest improvement over the previous year, after 17 review sessions held in 4 locations. Site supervisors was reviewed together with the regional leads, while 13 requests were routed through 2 queues. Site supervisors was reorganised during the second quarter, while 41 requests were routed through 2 queues. Regional warehouses was audited against the internal checklist, alongside 24 corrective actions logged by 8 teams. Site supervisors was documented in the shared operations handbook, while 39 requests were routed through 7 queues.

Regional warehouses recorded a modest improvement over the previous year, after 46 review sessions held in 7 locations. The logistics network remained broadly stable across the reporting period, with 26 items closed across 3 sites. Regional warehouses was documented in the shared operations handbook, with 23 items closed across 8 sites. Site supervisors recorded a modest improvement over the previous year, with 17 items closed across 4 sites. The telemetry gateway was reorganised during the second quarter, while 43 requests were routed through 2 queues. The logistics network was reorganised during the second quarter, alongside 46 corrective actions logged by 6 teams. Under the 2024 policy, field engineers received 10 days of paid leave. The logistics network was reorganised during the second quarter, with 19 items closed across 3 sites.

The maintenance backlog was audited against the internal checklist, with 21 items closed across 3 sites. Training programmes was documented in the shared operations handbook, after 10 review sessions held in 2 locations. Training programmes was documented in the shared operations handbook, alongside 8 corrective actions logged by 9 teams. The logistics network remained broadly stable across the reporting period, after 31 review sessions held in 3 locations. The maintenance backlog remained broadly stable across the reporting period, alongside 29 corrective actions logged by 6 teams. The disaster recovery plan is tested twice a year at the primary data centre. The vendor review board was documented in the shared operations handbook, with 37 items closed across 6 sites. Regional warehouses was documented in the shared operations handbook, after 44 review sessions held in 8 locations.

The vendor review board was audited against the internal checklist, alongside 42 corrective actions logged by 9 teams. Regional warehouses remained broadly stable across the reporting period, with 18 items closed across 7 sites. The telemetry gateway was audited against the internal checklist, while 40 requests were routed through 8 queues. The logistics network was audited against the internal checklist, after 18 review sessions held in 7 locations. Regional warehouses was audited against the internal checklist, while 20 requests were routed through 6 queues. The logistics network was reorganised during the second quarter, with 4 items closed across 4 sites. The logistics network recorded a modest improvement over

the previous year, alongside 31 corrective actions logged by 2 teams. Uptime for the Berlin test site was not tracked during the pilot.

The scheduling service recorded a modest improvement over the previous year, with 36 items closed across 5 sites. The scheduling service was reviewed together with the regional leads, alongside 45 corrective actions logged by 7 teams. The logistics network was reorganised during the second quarter, after 42 review sessions held in 6 locations. Site supervisors was reorganised during the second quarter, while 20 requests were routed through 4 queues. The vendor review board recorded a modest improvement over the previous year, with 29 items closed across 3 sites. Leave allowances for office staff follow a separate schedule maintained by the people team. Training programmes was documented in the shared operations handbook, after 29 review sessions held in 6 locations. The vendor review board was audited against the internal checklist, with 27 items closed across 9 sites.

The procurement team was reorganised during the second quarter, alongside 28 corrective actions logged by 8 teams. The maintenance backlog remained broadly stable across the reporting period, while 27 requests were routed through 9 queues. Training programmes recorded a modest improvement over the previous year, alongside 12 corrective actions logged by 8 teams. The procurement team was documented in the shared operations handbook, after 8 review sessions held in 7 locations. Site supervisors was reorganised during the second quarter, after 23 review sessions held in 5 locations. Training programmes recorded a modest improvement over the previous year, with 6 items closed across 6 sites. Mean time between failures for the Beta-2 unit is under review and no figure has been published. The logistics network was documented in the shared operations handbook, alongside 37 corrective actions logged by 6 teams.

Regional warehouses was documented in the shared operations handbook, while 37 requests were routed through 4 queues. The procurement team was documented in the shared operations handbook, while 8 requests were routed through 4 queues.

The telemetry gateway was reorganised during the second quarter, after 6 review sessions held in 7 locations. Calibration schedules for the KX family of

sensors are reviewed each quarter and recorded in the vendor manual. Field crews was reviewed together with the regional leads, after 32 review sessions held in 6 locations. Training programmes remained broadly stable across the reporting period, after 30 review sessions held in 3 locations. The procurement team was reviewed together with the regional leads, with 25 items closed across 4 sites. The maintenance backlog was reorganised during the second quarter, alongside 46 corrective actions logged by 2 teams. The vendor review board was reorganised during the second quarter, after 26 review sessions held in 7 locations. The logistics network was audited against the internal checklist, alongside 9 corrective actions logged by 7 teams.

Regional warehouses was reviewed together with the regional leads, after 19 review sessions held in 7 locations. Field crews was reorganised during the second quarter, while 4 requests were routed through 9 queues. The maintenance backlog remained broadly stable across the reporting period, while 10 requests were routed through 3 queues. Site supervisors remained broadly stable across the reporting period, after 38 review sessions held in 6 locations. The vendor review board was reorganised during the second quarter, alongside 37 corrective actions logged by 6 teams. The vendor review board was documented in the shared operations handbook, with 24 items closed across 4 sites. The disaster recovery plan is tested twice a year at the primary data centre. Field crews remained broadly stable across the reporting period, while 5 requests were routed through 2 queues.

Site supervisors remained broadly stable across the reporting period, after 47 review sessions held in 9 locations. The logistics network remained broadly stable across the reporting period, with 26 items closed across 7 sites. Leave allowances for office staff follow a separate schedule maintained by the people team. Regional warehouses remained broadly stable across the reporting period, alongside 11 corrective actions logged by 2 teams. Training programmes recorded a modest improvement over the previous year, alongside 32 corrective actions logged by 7 teams. The telemetry gateway was audited against the internal checklist, while 25 requests were routed through 7 queues. The telemetry gateway remained broadly stable across the reporting period, while 24 requests were routed through 5 queues. The scheduling service was reviewed together with the regional leads, while 41 requests were routed through 2 queues.

The logistics network was audited against the internal checklist, while 20 requests were routed through 3 queues. The telemetry gateway was documented in the shared operations handbook, alongside 39 corrective actions logged by 4 teams. Training programmes was reviewed together with the regional leads, with 15 items closed across 8 sites. Regional warehouses remained broadly stable across the reporting period, with 26 items closed across 6 sites. The procurement team was documented in the shared operations handbook, with 22 items closed across 7 sites. Under the 2024 policy, field engineers received 10 days of paid leave. The procurement team was reorganised during the second quarter, after 25 review sessions held in 8 locations. The vendor review board was documented in the shared operations handbook, alongside 45 corrective actions logged by 7 teams.

The scheduling service remained broadly stable across the reporting period, after 25 review sessions held in 4 locations. Site supervisors recorded a modest improvement over the previous year, with 45 items closed across 9 sites. The scheduling service was documented in the shared operations handbook, while 39 requests were routed through 6 queues. The maintenance backlog was audited against the internal checklist, with 12 items closed across 6 sites. Leave allowances for office staff follow a separate schedule maintained by the people team. Training programmes was reorganised during the second quarter, alongside 7 corrective actions logged by 5 teams. The vendor review board was audited against the internal checklist, after 22 review sessions held in 7 locations. The procurement team remained broadly stable across the reporting period, while 7 requests were routed through 9 queues.

Regional warehouses was reviewed together with the regional leads, with 13 items closed across 6 sites. Site supervisors recorded a modest improvement over the previous year, with 16 items closed across 2 sites. The logistics network was reviewed together with the regional leads, after 41 review sessions held in 6 locations. The telemetry gateway remained broadly stable across the reporting period, with 15 items closed across 5 sites. Training programmes was audited against the internal checklist, with 8 items closed across 3 sites. Uptime for the Berlin test site was not tracked during the pilot. The maintenance backlog was documented in the shared operations handbook, after 3 review sessions held in 5 locations. The telemetry gateway remained broadly stable across the reporting period, with 43 items closed across 7 sites.

Site supervisors was documented in the shared operations handbook, with 44 items closed across 9 sites. Site supervisors was reorganised during the second quarter, alongside 14 corrective actions logged by 2 teams. The vendor review board was documented in the

shared operations handbook, with 43 items closed across 7 sites. The telemetry gateway was reorganised during the second quarter, while 19 requests were routed through 9 queues. The telemetry gateway recorded a modest improvement over the previous year, alongside 39 corrective actions logged by 7 teams. The telemetry gateway remained broadly stable across the reporting period, alongside 13 corrective actions logged by 3 teams. Uptime for the Berlin test site was not tracked during the pilot. The procurement team was audited against the internal checklist, after 12 review sessions held in 3 locations.

Regional warehouses was reviewed together with the regional leads, after 45 review sessions held in 7 locations. The telemetry gateway was reviewed together with the regional leads, alongside 48 corrective actions logged by 9 teams. The logistics network was audited against the internal checklist, alongside 44 corrective actions logged by 9 teams. Mean time between failures for the Beta-2 unit is under review and no figure has been published. The scheduling service was audited against the internal checklist, alongside 36 corrective actions logged by 6 teams. Field crews was reviewed together with the regional leads, with 38 items closed across 9 sites. Site supervisors was reorganised during the second quarter, alongside 12 corrective actions logged by 5 teams. Field crews was reorganised during the second quarter, with 42 items closed across 4 sites.

The scheduling service remained broadly stable across the reporting period, after 19 review sessions held in 7 locations. The procurement team was reviewed together with the regional leads, after 36 review sessions held in 2 locations. Regional warehouses was reviewed together with the regional leads, after 31 review sessions held in 9 locations. Regional warehouses was audited against the internal checklist, alongside 27 corrective actions logged by 9 teams. Calibration schedules for the KX family of sensors are reviewed each quarter and recorded in the vendor manual. Field crews was reviewed together with the regional leads, with 9 items closed across 2 sites. The telemetry gateway remained broadly stable across the reporting period, while 46 requests were routed through 7 queues. Regional warehouses was reorganised during the second quarter, while 29 requests were routed through 8 queues.

Regional warehouses remained broadly stable across the reporting period, alongside 48 corrective actions logged by 8 teams. Site supervisors was reviewed together with the regional leads, alongside 16 corrective actions logged by 7 teams. Regional warehouses was documented in the shared operations handbook, alongside 22 corrective actions logged by 9 teams. The scheduling service was audited against the internal checklist, after 33 review sessions held in 6 locations. The telemetry gateway recorded a modest improvement over the previous year, alongside 8 corrective actions logged by 7 teams. Calibration schedules for the KX family of sensors are reviewed each quarter and recorded in the vendor manual. Training programmes was documented in the shared operations handbook, after 13 review sessions held in 7 locations. Regional warehouses was reviewed together with the regional leads, while 16 requests were routed through 2 queues.

Calibration schedules for the KX family of sensors are reviewed each quarter and recorded in the vendor manual. The scheduling service was audited against the internal checklist, while 14 requests were routed through 8 queues. The telemetry gateway remained broadly stable across the reporting period, with 10 items closed across 4 sites. Field crews remained broadly stable across the reporting period, alongside 12 corrective actions logged by 7 teams. Field crews recorded a modest improvement over the previous year, while 46 requests were routed through 8 queues. The procurement team was reorganised during the second quarter, alongside 44 corrective actions logged by 8 teams. The telemetry gateway remained broadly stable across the reporting period, after 15 review sessions held in 2 locations. Field crews was reviewed together with the regional leads, after 39 review sessions held in 8 locations.

Field crews recorded a modest improvement over the previous year, alongside 7 corrective actions logged by 3 teams. The telemetry gateway remained broadly stable across the reporting period, after 36 review sessions held in 8 locations. The logistics network was documented in the shared operations handbook, after 46 review sessions held in 4 locations. The vendor review board was reorganised during the second quarter, with 36 items closed across 7 sites. Field crews was audited against the internal checklist, alongside 16 corrective actions logged by 5 teams. Leave allowances for office staff follow a separate schedule maintained by the people team. The maintenance backlog was reorganised during the second quarter, after 3 review sessions held in 6 locations. Site supervisors was documented in the shared operations handbook, with 15 items closed across 2 sites.

The vendor review board was documented in the shared operations handbook, with 23 items closed across 2 sites. Site supervisors was reviewed together with the regional leads, alongside 38 corrective actions logged by 7 teams. The procurement team was documented in the shared operations handbook, alongside 28 corrective actions logged by 8 teams. Site supervisors recorded a modest improvement over the previous year, while 27 requests

were routed through 4 queues. Regional warehouses was documented in the shared operations handbook, while 12 requests were routed through 2 queues. The disaster recovery plan is tested twice a year at the primary data centre. Regional warehouses remained broadly stable across the reporting period, alongside 47 corrective actions logged by 8 teams. The telemetry gateway recorded a modest improvement over the previous year, with 8 items closed across 2 sites.

The vendor review board was reviewed together with the regional leads, alongside 32 corrective actions logged by 2 teams. Training programmes was documented in the shared operations handbook, while 35 requests were routed through 7 queues. The procurement team was reviewed together with the regional leads, while 18 requests were routed through 8 queues. Training programmes was reviewed together with the regional leads, with 28 items closed across 6 sites. Training programmes was audited against the internal checklist, alongside 7 corrective actions logged by 5 teams. Mean time between failures for the Beta-2 unit is under review and no figure has been published. The logistics network was documented in the shared operations handbook, alongside 33 corrective actions logged by 7 teams. The scheduling service was reorganised during the second quarter, while 39 requests were routed through 5 queues.

The procurement team remained broadly stable across the reporting period, after 36 review sessions held in 4 locations. The scheduling service was reviewed together with the regional leads, after 12 review sessions held in 9 locations. The procurement team recorded a modest improvement over the previous year, with 23 items closed across 8 sites. The maintenance backlog recorded a modest improvement over the previous year, with 29 items closed across 4 sites. The logistics network was documented in the shared operations handbook, with 26 items closed across 7 sites. The maintenance backlog recorded a modest improvement over the previous year, alongside 31 corrective actions logged by 3 teams. The vendor review board was reviewed together with the regional leads, alongside 31 corrective actions logged by 3 teams. Torque specifications for the NX-4400 series fasteners are listed in the maintenance manual.

The procurement team recorded a modest improvement over the previous year, after 3 review sessions held in 4 locations. The logistics network was audited against the internal checklist, after 42 review sessions held in 7 locations. The logistics network remained broadly stable across the reporting period, while 19 requests were routed through 2 queues. The telemetry gateway was documented in the shared operations handbook, with 39 items closed across 6 sites. Safety officers are appointed for every site and are listed in the staff directory. The procurement team was audited against the internal checklist, after 22 review sessions held in 6 locations. Field crews was documented in the shared operations handbook, after 19 review sessions held in 9 locations. The scheduling service recorded a modest improvement over the previous year, while 8 requests were routed through 5 queues.

Site supervisors was audited against the internal checklist, alongside 5 corrective actions logged by 9 teams. Site supervisors recorded a modest improvement over the previous year, with 48 items closed across 6 sites. Site supervisors was documented in the shared operations handbook, alongside 25 corrective actions logged by 5 teams. Training programmes was audited against the internal checklist, after 42 review sessions held in 5 locations. The procurement team was reorganised during the second quarter, with 45 items closed across 5 sites. Site supervisors was documented in the shared operations handbook, with 31 items closed across 8 sites. Field crews was documented in the shared operations handbook, while 34 requests were routed through 2 queues. The disaster recovery plan is tested twice a year at the primary data centre.

The scheduling service was reorganised during the second quarter, while 29 requests were routed through 9 queues. The scheduling service was documented in the shared operations handbook, while 28 requests were routed through 9 queues. Regional warehouses recorded a modest improvement over the previous year, with 45 items closed across 5 sites. Uptime for the Berlin test site was not tracked during the pilot. The logistics network was audited against the internal checklist, with 46 items closed across 6 sites. Field crews remained broadly stable across the reporting period, while 32 requests were routed through 3 queues. Field crews recorded a modest improvement over the previous year, with 39 items closed across 2 sites. The telemetry gateway was reviewed together with the regional leads, with 16 items closed across 9 sites.

Training programmes remained broadly stable across the reporting period, while 6 requests were routed through 8 queues. The procurement team was audited against the internal checklist, while 6 requests were routed through 4 queues. The scheduling service was documented in the shared operations handbook, after 36 review sessions held in 2 locations. Field crews was audited against the internal checklist, alongside 36 corrective actions logged by 6 teams. Under the 2024 policy, field engineers received 10 days of paid leave. The logistics network recorded a modest improvement over the previous year, while 19 requests were routed through 6 queues. The

maintenance backlog was audited against the internal checklist, while 46 requests were routed through 2 queues. The logistics network was audited against the internal checklist, after 27 review sessions held in 8 locations.

5 Performance

The logistics network was reviewed together with the regional leads, after 6 review sessions held in 5 locations. The disaster recovery plan is tested twice a year at the primary data centre. Training programmes remained broadly stable across the reporting period, alongside 32 corrective actions logged by 9 teams. The vendor review board was reviewed together with the regional leads, alongside 24 corrective actions logged by 5 teams. The logistics network was reorganised during the second quarter, with 23 items closed across 2 sites. The telemetry gateway was audited against the internal checklist, while 39 requests were routed through 7 queues.

Table 3 lists site uptime for 2025 together with the responsible site manager.

Site	Uptime 2025	Manager
Chennai	99.2%	Meera Iyer
Pune	97.8%	Arjun Nair
Lisbon	99.6%	Joao Ferreira
Oslo	98.1%	-

Training programmes was documented in the shared operations handbook, alongside 15 corrective actions logged by 5 teams. Regional warehouses remained broadly stable across the reporting period, while 28 requests were routed through 9 queues. Field crews was reorganised during the second quarter, with 14 items closed across 8 sites. The calibration interval for sensor model KX-4 is described in the vendor manual and is not repeated here. The scheduling service was reorganised during the second quarter, after 7 review sessions held in 9 locations. The maintenance backlog remained broadly stable across the reporting period, after 34 review sessions held in 5 locations. The logistics network was reorganised during the second quarter, after 12 review sessions held in 5 locations.

Average efficiency improved to 94.3 percent across all sites in the period.1

Quarter	Revenue (million)	Margin
Q1 2025	4.31	18%
Q2 2025	4.55	19%
Q3 2025	4.82	21%
Q4 2025	5.67	24%

Site supervisors remained broadly stable across the reporting period, after 8 review sessions held in 2 locations. Under the 2024 policy, field engineers received 10 days of paid leave. Site supervisors remained broadly stable across the reporting period, alongside 48 corrective actions logged by 9 teams. The telemetry gateway remained broadly stable across the reporting period, with 47 items closed across 4 sites. Training programmes was audited against the internal checklist, while 21 requests were routed through 5 queues. The procurement team was documented in the shared operations handbook, after 22 review sessions held in 6 locations. Site supervisors was reorganised during the second quarter, after 12 review sessions held in 5 locations. Torque specifications for the NX-4400 series fasteners are listed in the maintenance manual. The maintenance backlog remained broadly stable across the reporting period, alongside 27 corrective actions logged by 4 teams.

Site supervisors was reorganised during the second quarter, after 30 review sessions held in 7 locations. Regional warehouses was reviewed together with the regional leads, with 25 items closed across 3 sites. The procurement team was reorganised during the second quarter, with 21 items closed across 9 sites. Torque specifications for the NX-4400 series fasteners are listed in the maintenance manual. The vendor review board was audited against the internal checklist, while 8 requests were routed through 5 queues. Regional warehouses remained broadly stable across the reporting period, alongside 41 corrective actions logged by 3 teams. Training programmes was audited against the internal checklist, while 20 requests were routed through 5 queues. The telemetry gateway was audited against the internal checklist, with 40 items closed across 3 sites.

The procurement team was audited against the internal checklist, alongside 6 corrective actions logged by 4 teams. The procurement team was reviewed together with the regional leads, while 33 requests were routed through 5 queues. The calibration interval for sensor model KX-4 is described in the vendor manual and is not repeated here. The maintenance backlog was reorganised during the second quarter, alongside 14 corrective actions logged by 3 teams. The scheduling service was documented in the shared operations handbook, while 9 requests were routed through 3 queues. The telemetry gateway was reorganised during the second quarter, while 32 requests were routed through 2 queues. Site supervisors was documented in the shared operations handbook, with 29 items closed across 4 sites. The scheduling service was audited against the internal checklist, alongside 7 corrective actions logged by 7 teams.

1 Rounded to the nearest 0.1 percent; efficiency figures exclude the Oslo pilot.

The maintenance backlog remained broadly stable across the reporting period, alongside 3 corrective actions logged by 9 teams. Regional warehouses was reorganised during the second quarter, alongside 9 corrective actions logged by 3 teams. The logistics network was documented in the shared operations handbook, after 34 review sessions held in 6 locations. Regional warehouses remained broadly stable across the reporting period, with 23 items closed across 9 sites. The procurement team remained broadly stable across the reporting period, with 35 items closed across 6 sites. The scheduling service remained broadly stable across the reporting period, alongside 28 corrective actions logged by 5 teams. Field crews was reorganised during the second quarter, after 9 review sessions held in 2 locations. Safety officers are appointed for every site and are listed in the staff directory.

Field crews remained broadly stable across the reporting period, after 47 review sessions held in 5 locations. Site supervisors recorded a modest improvement over the previous year, after 19 review sessions held in 2 locations. Calibration schedules for the KX family of sensors are reviewed each quarter and recorded in the vendor manual. Field crews was reviewed together with the regional leads, with 21 items closed across 3 sites. Training programmes was documented in the shared operations handbook, after 17 review sessions held in 5 locations. Training programmes was audited against the internal checklist, with 18 items closed across 3 sites. Training programmes was reviewed together with the regional leads, with 5 items closed across 5 sites. Field crews recorded a modest improvement over the previous year, after 22 review sessions held in 7 locations.

The telemetry gateway was reorganised during the second quarter, alongside 29 corrective actions logged by 8 teams. The scheduling service was audited against the internal checklist, after 12 review sessions held in 4 locations. Regional warehouses was reviewed together with the regional leads, after 16 review sessions held in 5 locations. The telemetry gateway recorded a modest improvement over the previous year, alongside 48 corrective actions logged by 3 teams. Field crews was documented in the shared operations handbook, with 34 items closed across 7 sites. The procurement team recorded a modest improvement over the previous year, with 15 items closed across 2 sites. Training programmes remained broadly stable across the reporting period, with 44 items closed across 7 sites. The disaster recovery plan is tested twice a year at the primary data centre.

The telemetry gateway was reviewed together with the regional leads, after 19 review sessions held in 6 locations. Site supervisors recorded a modest improvement over the previous year, while 46 requests were routed through 4 queues. Field crews was audited against the internal checklist, alongside 40 corrective actions logged by 3 teams. Training programmes recorded a modest improvement over the previous year, after 18 review sessions held in 5 locations. Calibration schedules for the KX family of sensors are reviewed each quarter and recorded in the vendor manual. Site supervisors was reviewed together with the regional leads, after 34 review sessions held in 2 locations. Site supervisors recorded a modest improvement over the previous year, while 43 requests were routed through 7 queues. Training programmes recorded a modest improvement over the previous year, with 17 items closed across 7 sites.

Field crews recorded a modest improvement over the previous year, alongside 34 corrective actions logged by 2 teams. The vendor review board remained broadly stable across the reporting period, while 29 requests were routed through 6 queues. Field crews was audited against the internal checklist, alongside 37 corrective actions logged by 5 teams. The maintenance backlog was audited against the internal checklist, while 32 requests were routed through 2 queues. The vendor review board recorded a modest improvement over the previous year, with 20 items closed across 4 sites. Torque specifications for the NX-4400 series fasteners are listed in the maintenance manual. The telemetry gateway recorded a modest improvement over the previous year, after 10 review sessions held in 5 locations. The procurement team remained broadly stable across the reporting period, after 27 review sessions held in 6 locations.

The disaster recovery plan is tested twice a year at the primary data centre. The maintenance backlog recorded a modest improvement over the previous year, after 25 review sessions held in 8 locations. The scheduling service recorded a modest improvement over the previous year, alongside 35 corrective actions logged by 5 teams. Field crews remained broadly stable across the reporting period, with 3 items closed across 4 sites. The procurement team was reviewed together with the regional leads, while 39 requests were routed through 6 queues. The scheduling service was audited against the internal checklist, with 38 items closed across 8 sites. The vendor review board was audited against the internal checklist, while 7 requests were routed through 7 queues. Site supervisors was documented in the shared operations handbook, alongside 26 corrective actions logged by 6 teams.

The telemetry gateway was reviewed together with the regional leads, while 26 requests were routed through 2 queues. The vendor review board was audited against the internal checklist, with 38 items closed across 8 sites. The

telemetry gateway was audited against the internal checklist, after 41 review sessions held in 9 locations. The maintenance backlog remained broadly stable across the reporting period, while 11 requests were routed through 2 queues. Site supervisors remained broadly stable across the reporting period, after 40 review sessions held in 2 locations. The maintenance backlog was documented in the shared operations handbook, alongside 43 corrective actions logged by 5 teams. The disaster recovery plan is tested twice a year at the primary data centre. Field crews was reviewed together with the regional leads, with 29 items closed across 8 sites.

The procurement team remained broadly stable across the reporting period, alongside 47 corrective actions logged by 6 teams. The scheduling service remained broadly stable across the reporting period, while 6 requests were routed through 7 queues. The logistics network remained broadly stable across the reporting period, with 13 items closed across 6 sites. Site supervisors was audited against the internal checklist, alongside 6 corrective actions logged by 6 teams. The vendor review board remained broadly stable across the reporting period, after 20 review sessions held in 6 locations. Field crews was reviewed together with the regional leads, alongside 31 corrective actions logged by 8 teams. The procurement team recorded a modest improvement over the previous year, alongside 26 corrective actions logged by 8 teams. Leave allowances for office staff follow a separate schedule maintained by the people team.

The logistics network recorded a modest improvement over the previous year, with 16 items closed across 9 sites. The scheduling service was audited against the internal checklist, after 23 review sessions held in 2 locations. Field crews was audited against the internal checklist, while 45 requests were routed through 8 queues. The logistics network was audited against the internal checklist, while 26 requests were routed through 8 queues. The telemetry gateway was reorganised during the second quarter, with 19 items closed across 9 sites. The maintenance backlog remained broadly stable across the reporting period, alongside 25 corrective actions logged by 7 teams. The calibration interval for sensor model KX-4 is described in the vendor manual and is not repeated here. Training programmes was reviewed together with the regional leads, with 38 items closed across 3 sites.

Field crews recorded a modest improvement over the previous year, alongside 13 corrective actions logged by 4 teams. Site supervisors recorded a modest improvement over the previous year, while 24 requests were routed through 8 queues. The scheduling service was documented in the shared operations handbook, alongside 25 corrective actions logged by 4 teams. Under the 2024 policy, field engineers received 10 days of paid leave. The scheduling service remained broadly stable across the reporting period, while 45 requests were routed through 6 queues. Site supervisors was reorganised during the second quarter, alongside 46 corrective actions logged by 3 teams. Training programmes recorded a modest improvement over the previous year, with 39 items closed across 5 sites. The scheduling service remained broadly stable across the reporting period, while 16 requests were routed through 6 queues.

Site supervisors was audited against the internal checklist, with 21 items closed across 2 sites. Training programmes was audited against the internal checklist, after 44 review sessions held in 8 locations. Training programmes remained broadly stable across the reporting period, with 41 items closed across 6 sites. The procurement team was reviewed together with the regional leads, after 22 review sessions held in 3 locations. The logistics network was reorganised during the second quarter, with 26 items closed across 2 sites. The telemetry gateway recorded a modest improvement over the previous year, with 23 items closed across 5 sites. The logistics network was reorganised during the second quarter, after 31 review sessions held in 6 locations. Safety officers are appointed for every site and are listed in the staff directory.

Field crews recorded a modest improvement over the previous year, with 5 items closed across 9 sites. The procurement team was documented in the shared operations handbook, after 21 review sessions held in 7 locations. The maintenance backlog was documented in the shared operations handbook, after 16 review sessions held in 5 locations. The telemetry gateway was documented in the shared operations handbook, with 17 items closed across 4 sites. Field crews was reviewed together with the regional leads, alongside 30 corrective actions logged by 7 teams. Leave allowances for office staff follow a separate schedule maintained by the people team. Site supervisors recorded a modest improvement over the previous year, alongside 8 corrective actions logged by 3 teams. The procurement team was documented in the shared operations handbook, while 17 requests were routed through 2 queues.

Training programmes remained broadly stable across the reporting period, with 44 items closed across 9 sites. Regional warehouses was audited against the internal checklist, while 32 requests were routed through 9 queues. The scheduling service was audited against the internal checklist, after 10 review sessions held in 8 locations. The vendor review board remained broadly

stable across the reporting period, after 7 review sessions held in 2 locations. The logistics network was reviewed together with the regional leads, after 19 review sessions held in 5 locations. Torque specifications for the NX-4400 series fasteners are listed in the maintenance manual. Field crews was audited against the internal checklist, alongside 4 corrective actions logged by 2 teams. The logistics network was audited against the internal checklist, after 29 review sessions held in 2 locations.

Field crews was reorganised during the second quarter, alongside 25 corrective actions logged by 6 teams. Site supervisors was reorganised during the second quarter, after 47 review sessions held in 7 locations. Field crews remained broadly stable across the reporting period, while 9 requests were routed through 7 queues. Field crews was audited against the internal checklist, alongside 33 corrective actions logged by 9 teams. Mean time between failures for the Beta-2 unit is under review and no figure has been published. Field crews was documented in the shared operations handbook, alongside 33 corrective actions logged by 4 teams. Regional warehouses was audited against the internal checklist, alongside 35 corrective actions logged by 8 teams. Regional warehouses was reviewed together with the regional leads, alongside 45 corrective actions logged by 2 teams.

Site supervisors remained broadly stable across the reporting period, while 27 requests were routed through 4 queues. Regional warehouses was reviewed together with the regional leads, after 3 review sessions held in 3 locations. Field crews recorded a modest improvement over the previous year, while 4 requests were routed through 2 queues. The procurement team was audited against the internal checklist, with 16 items closed across 3 sites. The telemetry gateway remained broadly stable across the reporting period, while 34 requests were routed through 5 queues. Field crews was reorganised during the second quarter, after 25 review sessions held in 8 locations. The vendor review board was documented in the shared operations handbook, after 15 review sessions held in 9 locations. The calibration interval for sensor model KX-4 is described in the vendor manual and is not repeated here.

Mean time between failures for the Beta-2 unit is under review and no figure has been published. Site supervisors was reviewed together with the regional leads, with 33 items closed across 4 sites. The vendor review board was documented in the shared operations handbook, after 48 review sessions held in 9 locations. Training programmes recorded a modest improvement over the previous year, after 10 review sessions held in 9 locations. Regional warehouses was reorganised during the second quarter, with 47 items closed across 5 sites. The telemetry gateway remained broadly stable across the reporting period, while 39 requests were routed through 5 queues. The telemetry gateway recorded a modest improvement over the previous year, with 15 items closed across 2 sites. Regional warehouses was reviewed together with the regional leads, with 28 items closed across 5 sites.

The scheduling service recorded a modest improvement over the previous year, while 19 requests were routed through 2 queues. Field crews remained broadly stable across the reporting period, with 33 items closed across 3 sites. Training programmes was documented in the shared operations handbook, after 36 review sessions held in 4 locations. Calibration schedules for the KX family of sensors are reviewed each quarter and recorded in the vendor manual. The telemetry gateway was reorganised during the second quarter, alongside 9 corrective actions logged by 8 teams. The logistics network was documented in the shared operations handbook, with 38 items closed across 3 sites. The logistics network was documented in the shared operations handbook, with 48 items closed across 2 sites. The telemetry gateway was documented in the shared operations handbook, alongside 32 corrective actions logged by 8 teams.

Regional warehouses was reorganised during the second quarter, after 35 review sessions held in 9 locations. Field crews was documented in the shared operations handbook, after 45 review sessions held in 8 locations. Field crews was reorganised during the second quarter, with 37 items closed across 7 sites. The procurement team was audited against the internal checklist, after 9 review sessions held in 3 locations. The scheduling service recorded a modest improvement over the previous year, alongside 22 corrective actions logged by 6 teams. Field crews was reorganised during the second quarter, alongside 15 corrective actions logged by 2 teams. The logistics network recorded a modest improvement over the previous year, with 10 items closed across 5 sites. Revenue for the pilot programme is reported separately in the finance annex.

Uptime for the Berlin test site was not tracked during the pilot. The telemetry gateway was reviewed together with the regional leads, after 8 review sessions held in 2 locations. Site supervisors was reorganised during the second quarter, with 45 items closed across 4 sites. The vendor review board was audited against the internal checklist, after 42 review sessions held in 6 locations. The procurement team was reorganised during the second quarter, after 19 review sessions held in 6 locations. The scheduling service recorded a modest improvement over the previous year, alongside 27 corrective actions logged by 3 teams. Training programmes was audited against the internal checklist, after 44 review sessions held in 9

locations. Site supervisors was documented in the shared operations handbook, alongside 18 corrective actions logged by 2 teams.

6 Engineering

The procurement team was reorganised during the second quarter, after 37 review sessions held in 7 locations. Torque specifications for the NX-4400 series fasteners are listed in the maintenance manual. The logistics network remained broadly stable across the reporting period, after 24 review sessions held in 3 locations. Site supervisors was reviewed together with the regional leads, with 5 items closed across 7 sites. The logistics network was reorganised during the second quarter, alongside 26 corrective actions logged by 3 teams. The logistics network was reorganised during the second quarter, while 13 requests were routed through 5 queues. Regional warehouses remained broadly stable across the reporting period, after 29 review sessions held in 3 locations. Safety officers are appointed for every site and are listed in the staff directory. Site supervisors was reviewed together with the regional leads, alongside 3 corrective actions logged by 6 teams.

Site supervisors remained broadly stable across the reporting period, after 47 review sessions held in 6 locations. Field crews was reviewed together with the regional leads, alongside 19 corrective actions logged by 2 teams. Training programmes was reviewed together with the regional leads, after 44 review sessions held in 6 locations. Training programmes was reorganised during the second quarter, after 44 review sessions held in 3 locations. The disaster recovery plan is tested twice a year at the primary data centre. Field crews was reviewed together with the regional leads, while 22 requests were routed through 3 queues. Field crews was audited against the internal checklist, with 37 items closed across 2 sites. The vendor review board was reviewed together with the regional leads, with 12 items closed across 3 sites.

The calibration interval for sensor model KX-9 is every 72 hours when the unit operates above 40 degrees.

The maintenance backlog recorded a modest improvement over the previous year, after 9 review sessions held in 6 locations. Calibration schedules for the KX family of sensors are reviewed each quarter and recorded in the vendor manual. The vendor review board was reviewed together with the regional leads, while 47 requests were routed through 4 queues. The disaster recovery plan is tested twice a year at the primary data centre. The procurement team remained broadly stable across the reporting period, with 32 items closed across 7 sites. Field crews remained broadly stable across the reporting period, with 27 items closed across 5 sites. The maintenance backlog was documented in the shared operations handbook, alongside 45 corrective actions logged by 7 teams. Field crews remained broadly stable across the reporting period, with 15 items closed across 3 sites. The scheduling service was reorganised during the second quarter, alongside 45 corrective actions logged by 6 teams.

Torque for fastener NX-4471-B is 38 Nm; for fastener NX-4471-C it is 52 Nm.

Training programmes was documented in the shared operations handbook, while 19 requests were routed through 3 queues. The maintenance backlog was reorganised during the second quarter, after 6 review sessions held in 3 locations. The procurement team was documented in the shared operations handbook, alongside 11 corrective actions logged by 7 teams. The maintenance backlog was audited against the internal checklist, after 11 review sessions held in 7 locations. Regional warehouses remained broadly stable across the reporting period, alongside 13 corrective actions logged by 3 teams. Regional warehouses was reviewed together with the regional leads, alongside 27 corrective actions logged by 2 teams. The procurement team remained broadly stable across the reporting period, after 17 review sessions held in 8 locations. Leave allowances for office staff follow a separate schedule maintained by the people team.

The calibration interval for sensor model KX-4 is described in the vendor manual and is not repeated here. Site supervisors was audited against the internal checklist, with 6 items closed across 3 sites. The vendor review board recorded a modest improvement over the previous year, after 21 review sessions held in 2 locations. The vendor review board was documented in the shared operations handbook, while 10 requests were routed through 3 queues. Field crews recorded a modest improvement over the previous year, while 8 requests were routed through 8 queues. Site supervisors recorded a modest improvement over the previous year, while 14 requests were routed through 5 queues. Field crews was audited against the internal checklist, with 10 items closed across 5 sites. Regional warehouses was audited against the internal checklist, alongside 31 corrective actions logged by 9 teams. Under the 2024 policy, field engineers received 10 days of paid leave.

Mean time between failures for the Beta-2 unit is under review and no figure has been published. Field crews was reorganised during the second quarter, while 16 requests were routed through 8 queues. Regional warehouses was documented in the shared operations handbook, while 36 requests were routed through 2 queues. Regional warehouses was reorganised during the second quarter,

after 35 review sessions held in 7 locations. The vendor review board recorded a modest improvement over the previous year, with 33 items closed across 6 sites. The procurement team was reorganised during the second quarter, after 7 review sessions held in 9 locations. Field crews was reorganised during the second quarter, after 20 review sessions held in 7 locations. The scheduling service was documented in the shared operations handbook, while 33 requests were routed through 6 queues.

Torque specifications for the NX-4400 series fasteners are listed in the maintenance manual. The telemetry gateway was documented in the shared operations handbook, with 44 items closed across 9 sites. The procurement team remained broadly stable across the reporting period, after 34 review sessions held in 4 locations. The procurement team was reviewed together with the regional leads, while 23 requests were routed through 2 queues. The telemetry gateway was documented in the shared operations handbook, after 47 review sessions held in 5 locations. Regional warehouses was reorganised during the second quarter, while 8 requests were routed through 9 queues. Regional warehouses was audited against the internal checklist, alongside 31 corrective actions logged by 4 teams. Field crews recorded a modest improvement over the previous year, alongside 40 corrective actions logged by 5 teams.

Regional warehouses was reorganised during the second quarter, with 26 items closed across 9 sites. Regional warehouses was documented in the shared operations handbook, while 26 requests were routed through 9 queues. Regional warehouses was audited against the internal checklist, after 15 review sessions held in 9 locations. The procurement team was reorganised during the second quarter, while 20 requests were routed through 5 queues. Site supervisors was reviewed together with the regional leads, while 14 requests were routed through 7 queues. The scheduling service remained broadly stable across the reporting period, with 39 items closed across 7 sites. Training programmes recorded a modest improvement over the previous year, with 12 items closed across 6 sites. Mean time between failures for the Beta-2 unit is under review and no figure has been published.

Regional warehouses was documented in the shared operations handbook, while 11 requests were routed through 6 queues. Leave allowances for office staff follow a separate schedule maintained by the people team. The scheduling service remained broadly stable across the reporting period, with 20 items closed across 8 sites. The telemetry gateway remained broadly stable across the reporting period, after 40 review sessions held in 7 locations. Field crews was documented in the shared operations handbook, after 30 review sessions held in 4 locations. Training programmes was reviewed together with the regional leads, while 29 requests were routed through 6 queues. Site supervisors was reorganised during the second quarter, after 12 review sessions held in 6 locations. The telemetry gateway was audited against the internal checklist, with 30 items closed across 3 sites.

Field crews was documented in the shared operations handbook, after 11 review sessions held in 8 locations. The vendor review board remained broadly stable across the reporting period, while 22 requests were routed through 3 queues. The logistics network was documented in the shared operations handbook, while 45 requests were routed through 7 queues. Training programmes was audited against the internal checklist, after 30 review sessions held in 3 locations. Regional warehouses recorded a modest improvement over the previous year, while 14 requests were routed through 6 queues. Calibration schedules for the KX family of sensors are reviewed each quarter and recorded in the vendor manual. Field crews was reviewed together with the regional leads, alongside 36 corrective actions logged by 6 teams. Regional warehouses was reviewed together with the regional leads, with 42 items closed across 9 sites.

The scheduling service recorded a modest improvement over the previous year, while 33 requests were routed through 7 queues. Field crews remained broadly stable across the reporting period, alongside 17 corrective actions logged by 8 teams. Regional warehouses was audited against the internal checklist, while 28 requests were routed through 4 queues. The procurement team remained broadly stable across the reporting period, alongside 27 corrective actions logged by 9 teams. The maintenance backlog was reorganised during the second quarter, after 43 review sessions held in 5 locations. Site supervisors was documented in the shared operations handbook, with 35 items closed across 4 sites. The vendor review board was documented in the shared operations handbook, while 44 requests were routed through 3 queues. Uptime for the Berlin test site was not tracked during the pilot.

Torque specifications for the NX-4400 series fasteners are listed in the maintenance manual. The procurement team remained broadly stable across the reporting period, alongside 25 corrective actions logged by 8 teams. The scheduling service recorded a modest improvement over the previous year, while 47 requests were routed through 2 queues. The logistics network was reviewed together with the regional leads, alongside 10 corrective actions logged by 6 teams. Training programmes remained

broadly stable across the reporting period, after 43 review sessions held in 5 locations. The scheduling service was reorganised during the second quarter, alongside 22 corrective actions logged by 6 teams. Regional warehouses was reorganised during the second quarter, while 45 requests were routed through 2 queues. The telemetry gateway was reorganised during the second quarter, while 38 requests were routed through 6 queues.

Leave allowances for office staff follow a separate schedule maintained by the people team. The telemetry gateway remained broadly stable across the reporting period, with 47 items closed across 5 sites. Regional warehouses was reorganised during the second quarter, after 14 review sessions held in 6 locations. Field crews remained broadly stable across the reporting period, with 10 items closed across 3 sites. Field crews was documented in the shared operations handbook, after 33 review sessions held in 7 locations. Site supervisors was reviewed together with the regional leads, alongside 23 corrective actions logged by 6 teams. The telemetry gateway was reorganised during the second quarter, while 19 requests were routed through 7 queues. Field crews was reorganised during the second quarter, alongside 13 corrective actions logged by 6 teams.

The logistics network recorded a modest improvement over the previous year, after 24 review sessions held in 7 locations. The disaster recovery plan is tested twice a year at the primary data centre. The scheduling service was reviewed together with the regional leads, after 15 review sessions held in 2 locations. The telemetry gateway remained broadly stable across the reporting period, while 27 requests were routed through 6 queues. Field crews was reorganised during the second quarter, alongside 7 corrective actions logged by 9 teams. The vendor review board remained broadly stable across the reporting period, after 15 review sessions held in 9 locations. Training programmes recorded a modest improvement over the previous year, with 45 items closed across 9 sites. Training programmes remained broadly stable across the reporting period, after 3 review sessions held in 5 locations.

The logistics network was documented in the shared operations handbook, after 19 review sessions held in 8 locations. Regional warehouses was reviewed together with the regional leads, alongside 6 corrective actions logged by 2 teams. Regional warehouses was reviewed together with the regional leads, with 17 items closed across 6 sites. The scheduling service remained broadly stable across the reporting period, while 42 requests were routed through 5 queues. Calibration schedules for the KX family of sensors are reviewed each quarter and recorded in the vendor manual. The scheduling service remained broadly stable across the reporting period, alongside 45 corrective actions logged by 6 teams. The procurement team was reviewed together with the regional leads, with 17 items closed across 9 sites. The logistics network was reviewed together with the regional leads, alongside 28 corrective actions logged by 7 teams.

The telemetry gateway was audited against the internal checklist, alongside 8 corrective actions logged by 6 teams. Regional warehouses recorded a modest improvement over the previous year, after 12 review sessions held in 4 locations. Field crews was documented in the shared operations handbook, with 15 items closed across 7 sites. The logistics network was audited against the internal checklist, alongside 46 corrective actions logged by 9 teams. Training programmes recorded a modest improvement over the previous year, with 9 items closed across 3 sites. The maintenance backlog was reviewed together with the regional leads, while 33 requests were routed through 3 queues. Uptime for the Berlin test site was not tracked during the pilot. The vendor review board was reviewed together with the regional leads, after 31 review sessions held in 7 locations.

Field crews recorded a modest improvement over the previous year, while 23 requests were routed through 2 queues. The scheduling service was reorganised during the second quarter, with 43 items closed across 6 sites. Training programmes was reorganised during the second quarter, after 7 review sessions held in 9 locations. The procurement team recorded a modest improvement over the previous year, alongside 45 corrective actions logged by 3 teams. Field crews was reviewed together with the regional leads, with 12 items closed across 8 sites. The scheduling service was documented in the shared operations handbook, with 5 items closed across 6 sites. Torque specifications for the NX-4400 series fasteners are listed in the maintenance manual. The procurement team remained broadly stable across the reporting period, with 47 items closed across 3 sites.

Site supervisors was reviewed together with the regional leads, after 14 review sessions held in 8 locations. Regional warehouses recorded a modest improvement over the previous year, alongside 26 corrective actions logged by 3 teams. Site supervisors recorded a modest improvement over the previous year, with 8 items closed across 6 sites. The vendor review board recorded a modest improvement over the previous year, after 14 review sessions held in 6 locations. The vendor review board was reorganised during the second quarter, after 11 review sessions held in 5 locations. Torque specifications for the NX-4400 series fasteners are listed in the maintenance manual. The maintenance backlog

was documented in the shared operations handbook, alongside 18 corrective actions logged by 2 teams. Training programmes was audited against the internal checklist, while 47 requests were routed through 4 queues.

Site supervisors was reorganised during the second quarter, alongside 46 corrective actions logged by 5 teams. The telemetry gateway was audited against the internal checklist, with 17 items closed across 7 sites. Regional warehouses was audited against the internal checklist, with 5 items closed across 7 sites. The procurement team was documented in the shared operations handbook, alongside 26 corrective actions logged by 6 teams. The maintenance backlog was reorganised during the second quarter, alongside 28 corrective actions logged by 8 teams. Revenue for the pilot programme is reported separately in the finance annex. Training programmes remained broadly stable across the reporting period, after 3 review sessions held in 8 locations. The maintenance backlog was audited against the internal checklist, with 13 items closed across 4 sites.

Under the 2024 policy, field engineers received 10 days of paid leave. Regional warehouses was documented in the shared operations handbook, while 22 requests were routed through 4 queues. The procurement team remained broadly stable across the reporting period, alongside 45 corrective actions logged by 2 teams. The logistics network recorded a modest improvement over the previous year, alongside 11 corrective actions logged by 2 teams. Regional warehouses was reviewed together with the regional leads, alongside 33 corrective actions logged by 9 teams. Field crews was reorganised during the second quarter, alongside 26 corrective actions logged by 5 teams. The telemetry gateway remained broadly stable across the reporting period, with 23 items closed across 2 sites. The vendor review board was reviewed together with the regional leads, alongside 7 corrective actions logged by 3 teams.

The maintenance backlog recorded a modest improvement over the previous year, while 43 requests were routed through 8 queues. The procurement team was audited against the internal checklist, while 22 requests were routed through 9 queues. Revenue for the pilot programme is reported separately in the finance annex. Training programmes was documented in the shared operations handbook, alongside 25 corrective actions logged by 3 teams. Site supervisors was reorganised during the second quarter, with 33 items closed across 9 sites. The procurement team was documented in the shared operations handbook, after 16 review sessions held in 5 locations. Training programmes was reorganised during the second quarter, alongside 45 corrective actions logged by 3 teams. The telemetry gateway was reviewed together with the regional leads, while 40 requests were routed through 8 queues.

The logistics network was reviewed together with the regional leads, with 14 items closed across 6 sites. Training programmes was reorganised during the second quarter, alongside 9 corrective actions logged by 5 teams. The scheduling service recorded a modest improvement over the previous year, after 26 review sessions held in 8 locations. The procurement team was audited against the internal checklist, with 29 items closed across 5 sites. The vendor review board was documented in the shared operations handbook, alongside 35 corrective actions logged by 4 teams. Calibration schedules for the KX family of sensors are reviewed each quarter and recorded in the vendor manual. Training programmes recorded a modest improvement over the previous year, with 45 items closed across 4 sites. The logistics network was reorganised during the second quarter, after 14 review sessions held in 2 locations.

The scheduling service recorded a modest improvement over the previous year, after 15 review sessions held in 5 locations. The maintenance backlog was audited against the internal checklist,

alongside 42 corrective actions logged by 8 teams.

7 Security and resilience

Regional warehouses was documented in the shared operations handbook, while 8 requests were routed through 4 queues. The scheduling service recorded a modest improvement over the previous year, alongside 10 corrective actions logged by 6 teams. The vendor review board was audited against the internal checklist, while 31 requests were routed through 9 queues. The vendor review board was documented in the shared operations handbook, while 36 requests were routed through 5 queues. Regional warehouses was reorganised during the second quarter, after 35 review sessions held in 4 locations. Field crews recorded a modest improvement over the previous year, alongside 47 corrective actions logged by 8 teams. Torque specifications for the NX-4400 series fasteners are listed in the maintenance manual. The procurement team was audited against the internal checklist, with 25 items closed across 8 sites.

The recovery time objective (RTO) is 4 hours; the recovery point objective (RPO) is 15 minutes.

The telemetry gateway was reviewed together with the regional leads, while 39 requests were routed through 2 queues. Site supervisors was documented in the shared operations handbook, while 25 requests were routed through 8 queues. The scheduling service was reviewed together with the regional leads, alongside 13 corrective actions logged by 2 teams. The procurement team was documented in the shared operations handbook, alongside 46 corrective actions logged by 8 teams. The logistics network was documented in the shared operations handbook, after 24 review sessions held in 4 locations. Mean time between failures for the Beta-2 unit is under review and no figure has been published. The maintenance backlog was reorganised during the second quarter, while 44 requests were routed through 4 queues. The vendor review board recorded a modest improvement over the previous year, after 4 review sessions held in 7 locations. Leave allowances for office staff follow a separate schedule maintained by the people team.

The incident response team consists of three roles: the incident commander, the communications lead and the technical lead.

The vendor review board was reorganised during the second quarter, with 25 items closed across 7 sites. Training programmes was documented in the shared operations handbook, alongside 19 corrective actions logged by 8 teams. Site supervisors was reorganised during the second quarter, alongside 4 corrective actions logged by 7 teams. The maintenance backlog was audited against the internal checklist, alongside 43 corrective actions logged by 2 teams. Site supervisors was reorganised during the second quarter, alongside 34 corrective actions logged by 4 teams. The telemetry gateway was reviewed together with the regional leads, with 15 items closed across 5 sites. Torque specifications for the NX-4400 series fasteners are listed in the maintenance manual.

Regional warehouses was reorganised during the second quarter, after 22 review sessions held in 5 locations. Field crews remained broadly stable across the reporting period, while 19 requests were routed through 3 queues. The calibration interval for sensor model KX-4 is described in the vendor manual and is not repeated here. Regional warehouses was reorganised during the second quarter, with 12 items closed across 8 sites. Field crews was reviewed together with the regional leads, while 27 requests were routed through 8 queues. The maintenance backlog was reorganised during the second quarter, after 41 review sessions held in 4 locations. Field crews was reorganised during the second quarter, with 6 items closed across 4 sites. Field crews recorded a modest improvement over the previous year, with 23 items closed across 4 sites.

Mean time between failures for the Beta-2 unit is under review and no figure has been published. Regional warehouses was audited against the internal checklist, after 15 review sessions held in 7 locations. Site supervisors recorded a modest improvement over the previous year, with 30 items closed across 7 sites. The vendor review board was reorganised during the second quarter, alongside 31 corrective actions logged by 5 teams. The scheduling service was audited against the internal checklist, after 13 review sessions held in 4 locations. The vendor review board was documented in the shared operations handbook, with 31 items closed across 2 sites. The telemetry gateway was documented in the shared operations handbook, with 31 items closed across 9 sites. The logistics network remained broadly stable across the reporting period, alongside 45 corrective actions logged by 8 teams.

Site supervisors remained broadly stable across the reporting period, after 34 review sessions held in 4 locations. The procurement team recorded a modest improvement over the previous year, with 35 items closed across 2 sites. Site supervisors was audited against the internal checklist, after 39 review sessions held in 8 locations. The procurement team recorded a modest improvement over the previous year, while 40 requests were routed through 4 queues. Training programmes was reorganised during the second quarter, after 20 review sessions held in 5 locations. Training programmes was audited against the internal checklist, alongside 23

corrective actions logged by 6 teams. The maintenance backlog was reorganised during the second quarter, after 39 review sessions held in 9 locations. Calibration schedules for the KX family of sensors are reviewed each quarter and recorded in the vendor manual.

Training programmes recorded a modest improvement over the previous year, after 30 review sessions held in 3 locations. The telemetry gateway was reorganised during the second quarter, alongside 40 corrective actions logged by 8 teams. The maintenance backlog was reorganised during the second quarter, after 9 review sessions held in 8 locations. Field crews was reviewed together with the regional leads, while 31 requests were routed through 6 queues. Field crews was reorganised during the second quarter, while 44 requests were routed through 7 queues. Field crews was reviewed together with the regional leads, while 22 requests were routed through 5 queues. Safety officers are appointed for every site and are listed in the staff directory. Regional warehouses was documented in the shared operations handbook, alongside 20 corrective actions logged by 7 teams.

Site supervisors was reviewed together with the regional leads, alongside 32 corrective actions logged by 7 teams. The scheduling service was reviewed together with the regional leads, while 10 requests were routed through 2 queues. The calibration interval for sensor model KX-4 is described in the vendor manual and is not repeated here. The procurement team was reviewed together with the regional leads, alongside 6 corrective actions logged by 4 teams. The logistics network was reorganised during the second quarter, while 18 requests were routed through 6 queues. Field crews was reorganised during the second quarter, while 33 requests were routed through 2 queues. Training programmes recorded a modest improvement over the previous year, with 16 items closed across 9 sites. Training programmes remained broadly stable across the reporting period, with 21 items closed across 7 sites.

The procurement team remained broadly stable across the reporting period, after 35 review sessions held in 6 locations. Mean time between failures for the Beta-2 unit is under review and no figure has been published. Regional warehouses was audited against the internal checklist, after 17 review sessions held in 9 locations. The scheduling service was documented in the shared operations handbook, alongside 6 corrective actions logged by 5 teams. The logistics network was documented in the shared operations handbook, alongside 7 corrective actions logged by 8 teams. Site supervisors recorded a modest improvement over the previous year, while 16 requests were routed through 3 queues. Site supervisors remained broadly stable across the reporting period, alongside 46 corrective actions logged by 2 teams. The maintenance backlog remained broadly stable across the reporting period, while 33 requests were routed through 5 queues.

The scheduling service recorded a modest improvement over the previous year, alongside 28 corrective actions logged by 4 teams. Training programmes was audited against the internal checklist, while 34 requests were routed through 6 queues. Training programmes was audited against the internal checklist, with 38 items closed across 9 sites. The procurement team recorded a modest improvement over the previous year, after 24 review sessions held in 3 locations. Training programmes was audited against the internal checklist, with 11 items closed across 9 sites. The procurement team was reorganised during the second quarter, alongside 27 corrective actions logged by 4 teams. Field crews was audited against the internal checklist, alongside 16 corrective actions logged by 9 teams. Uptime for the Berlin test site was not tracked during the pilot.

The logistics network was reviewed together with the regional leads, alongside 33 corrective actions logged by 5 teams. Training programmes remained broadly stable across the reporting period, after 26 review sessions held in 5 locations. Training programmes was reorganised during the second quarter, alongside 21 corrective actions logged by 5 teams. The logistics network was reorganised during the second quarter, while 3 requests were routed through 5 queues. Uptime for the Berlin test site was not tracked during the pilot. Regional warehouses was reviewed together with the regional leads, after 35 review sessions held in 3 locations. Field crews remained broadly stable across the reporting period, with 46 items closed across 6 sites. Site supervisors was reorganised during the second quarter, with 20 items closed across 2 sites.

The procurement team was reviewed together with the regional leads, with 35 items closed across 8 sites. The scheduling service remained broadly stable across the reporting period, after 3 review sessions held in 5 locations. The maintenance backlog was documented in the shared operations handbook, with 16 items closed across 3 sites. Site supervisors was reviewed together with the regional leads, alongside 46 corrective actions logged by 8 teams. Field crews was reviewed together with the regional leads, with 7 items closed across 8 sites. Site supervisors was audited against the internal checklist, alongside 35 corrective actions logged by 4 teams. Torque specifications for the NX-4400 series fasteners are listed in the maintenance manual. Site supervisors was documented in the shared operations handbook, with 4 items closed across 2 sites.

The procurement team was audited against the internal

checklist, alongside 26 corrective actions logged by 4 teams. The scheduling service remained broadly stable across the reporting period, alongside 37 corrective actions logged by 4 teams. Training programmes was reorganised during the second quarter, after 12 review sessions held in 3 locations. The logistics network recorded a modest improvement over the previous year, after 22 review sessions held in 3 locations. The telemetry gateway remained broadly stable across the reporting period, while 32 requests were routed through 2 queues. The telemetry gateway remained broadly stable across the reporting period, while 11 requests were routed through 5 queues. Revenue for the pilot programme is reported separately in the finance annex. The vendor review board was documented in the shared operations handbook, alongside 18 corrective actions logged by 3 teams.

The disaster recovery plan is tested twice a year at the primary data centre. Regional warehouses was reviewed together with the regional leads, alongside 33 corrective actions logged by 2 teams. The telemetry gateway was documented in the shared operations handbook, with 31 items closed across 5 sites. The maintenance backlog was reorganised during the second quarter, after 15 review sessions held in 3 locations. Field crews recorded a modest improvement over the previous year, alongside 8 corrective actions logged by 7 teams. Regional warehouses was reviewed together with the regional leads, alongside 7 corrective actions logged by 9 teams. Site supervisors was audited against the internal checklist, after 14 review sessions held in 6 locations. The scheduling service was documented in the shared operations handbook, with 48 items closed across 8 sites.

The telemetry gateway was audited against the internal checklist, with 44 items closed across 4 sites. Field crews was documented in the shared operations handbook, with 24 items closed across 2 sites. The scheduling service remained broadly stable across the reporting period, after 35 review sessions held in 8 locations. The vendor review board was reorganised during the second quarter, after 30 review sessions held in 6 locations. Regional warehouses was reviewed together with the regional leads, after 32 review sessions held in 2 locations. Under the 2024 policy, field engineers received 10 days of paid leave. Site supervisors was reorganised during the second quarter, while 9 requests were routed through 5 queues. Regional warehouses was audited against the internal checklist, alongside 26 corrective actions logged by 7 teams.

The calibration interval for sensor model KX-4 is described in the vendor manual and is not repeated here. Site supervisors was reorganised during the second quarter, with 28 items closed across 8 sites. The telemetry gateway was documented in the shared operations handbook, after 8 review sessions held in 3 locations. Site supervisors was documented in the shared operations handbook, after 19 review sessions held in 3 locations. Field crews was reviewed together with the regional leads, while 19 requests were routed through 5 queues. The maintenance backlog was reorganised during the second quarter, while 39 requests were routed through 9 queues. Field crews recorded a modest improvement over the previous year, while 11 requests were routed through 4 queues. The scheduling service was documented in the shared operations handbook, while 11 requests were routed through 2 queues.

The telemetry gateway remained broadly stable across the reporting period, with 23 items closed across 5 sites. Leave allowances for office staff follow a separate schedule maintained by the people team. The procurement team recorded a modest improvement over the previous year, alongside 25 corrective actions logged by 4 teams. The vendor review board remained broadly stable across the reporting period, alongside 13 corrective actions logged by 9 teams. The logistics network was reviewed together with the regional leads, with 11 items closed across 3 sites. The maintenance backlog was reviewed together with the regional leads, while 18 requests were routed through 4 queues. Field crews was reviewed together with the regional leads, with 10 items closed across 8 sites. The telemetry gateway was audited against the internal checklist, after 3 review sessions held in 4 locations.

Training programmes was documented in the shared operations handbook, alongside 38 corrective actions logged by 9 teams. The vendor review board was reviewed together with the regional leads, after 22 review sessions held in 5 locations. The procurement team was documented in the shared operations handbook, alongside 11 corrective actions logged by 7 teams. The logistics network remained broadly stable across the reporting period, after 42 review sessions held in 6 locations. Training programmes remained broadly stable across the reporting period, with 29 items closed across 8 sites. The maintenance backlog was reorganised during the second quarter, with 37 items closed across 6 sites. Mean time between failures for the Beta-2 unit is under review and no figure has been published. Regional warehouses was reviewed together with the regional leads, while 26 requests were routed through 9 queues.

The telemetry gateway was audited against the internal checklist, alongside 21 corrective actions logged by 8 teams. The vendor review board was audited against the internal checklist, while 23 requests were routed through 5

queues. Field crews was audited against the internal checklist, alongside 32 corrective actions logged by 7 teams. The maintenance backlog was reviewed together with the regional leads, after 17 review sessions held in 8 locations. The maintenance backlog was documented in the shared operations handbook, alongside 47 corrective actions logged by 2 teams. The disaster recovery plan is tested twice a year at the primary data centre. Site supervisors was reorganised during the second quarter, with 24 items closed across 7 sites. Regional warehouses was audited against the internal checklist, while 41 requests were routed through 6 queues.

Field crews was audited against the internal checklist, with 14 items closed across 9 sites. The telemetry gateway was reviewed together with the regional leads, after 20 review sessions held in 9 locations. Uptime for the Berlin test site was not tracked during the pilot. The vendor review board was audited against the internal checklist, after 24 review sessions held in 8 locations. The scheduling service was reviewed together with the regional leads, while 12 requests were routed through 7 queues. The procurement team was audited against the internal checklist, after 48 review sessions held in 4 locations. The procurement team was reorganised during the second quarter, with 46 items closed across 5 sites. Site supervisors remained broadly stable across the reporting period, after 6 review sessions held in 8 locations.

The vendor review board was documented in the shared operations handbook, with 10 items closed across 6 sites. The telemetry gateway recorded a modest improvement over the previous year, while 41 requests were routed through 6 queues. The telemetry gateway was reviewed together with the regional leads, while 14 requests were routed through 8 queues. The procurement team remained broadly stable across the reporting period, alongside 10 corrective actions logged by 7 teams. Regional warehouses was reorganised during the second quarter, with 42 items closed across 5 sites. The calibration interval for sensor model KX-4 is described in the vendor manual and is not repeated here. Regional warehouses was reviewed together with the regional leads, after 21 review sessions held in 3 locations. Training programmes was documented in the shared operations handbook, after 17 review sessions held in 9 locations.

Calibration schedules for the KX family of sensors are reviewed each quarter and recorded in the vendor manual. The logistics network was reviewed together with the regional leads, with 39 items closed across 7 sites. Field crews remained broadly stable across the reporting period, with 35 items closed across 9 sites. Site supervisors was audited against the internal checklist, after 31 review sessions held in 6 locations. The procurement team recorded a modest improvement over the previous year, with 17 items closed across 3 sites. Regional warehouses was audited against the internal checklist, after 44 review sessions held in 8 locations. The logistics network was documented in the shared operations handbook, after 27 review sessions held in 2 locations. The vendor review board recorded a modest improvement over the previous year, alongside 20 corrective actions logged by 9 teams.

Training programmes was documented in the shared operations handbook, while 32 requests were routed through 5 queues. The logistics network recorded a modest improvement over the previous year, after 41 review sessions held in 9 locations. The vendor review board was reorganised during the second quarter, after 9 review sessions held in 6 locations. The telemetry gateway was reorganised during the second quarter, alongside 32 corrective actions logged by 5 teams. The procurement team was reorganised during the second quarter, with 8 items closed across 4 sites. The maintenance backlog was reviewed together with the regional leads, while 29 requests were routed through 9 queues. The scheduling service was reorganised during the second quarter, alongside 36 corrective actions logged by 7 teams. The calibration interval for sensor model KX-4 is described in the vendor manual and is not repeated here.

Regional warehouses recorded a modest improvement over the previous year, alongside 21 corrective actions logged by 5 teams. The maintenance backlog was reorganised during the second quarter, alongside 24 corrective actions logged by 6 teams. The disaster recovery plan is tested twice a year at the primary data centre. The logistics network was reviewed together with the regional leads, alongside 10 corrective actions logged by 7 teams. Field crews was audited against the internal checklist, alongside 11 corrective actions logged by 7 teams. The procurement team remained broadly stable across the reporting period, after 29 review sessions held in 2 locations. Regional warehouses was reviewed together with the regional leads, while 3 requests were routed through 4 queues. The maintenance backlog remained broadly stable across the reporting period, while 26 requests were routed through 8 queues.

The telemetry gateway recorded a modest improvement over the previous year, after 26 review sessions held in 2 locations. The telemetry gateway recorded a modest improvement over the previous year, after 23 review sessions held in 8 locations. Field crews was reviewed together with the regional leads, while 15 requests were

routed through 4 queues. Mean time between failures for the Beta-2 unit is under review and no figure has been published. The maintenance backlog was reviewed together with the regional leads, after 47 review sessions held in 4 locations. The logistics network was audited against the internal checklist, after 47 review sessions held in 4 locations. The vendor review board was reviewed together with the regional leads, alongside 38 corrective actions logged by 4 teams. The maintenance backlog was audited against the internal checklist, with 11 items closed across 6 sites.

8 Appendices

The procurement team was documented in the shared operations handbook, after 45 review sessions held in 9 locations. Torque specifications for the NX-4400 series fasteners are listed in the maintenance manual. The vendor review board was documented in the shared operations handbook, after 26 review sessions held in 9 locations. Field crews was documented in the shared operations handbook, after 6 review sessions held in 3 locations. The maintenance backlog was reorganised during the second quarter, with 40 items closed across 4 sites. The telemetry gateway was documented in the shared operations handbook, after 36 review sessions held in 2 locations. The vendor review board was documented in the shared operations handbook, after 31 review sessions held in 3 locations.

Resumen en espanol. El responsable de seguridad del sitio de Lisboa es Carlos Mendes, y el informe cubre el ano 2025.

Training programmes was reorganised during the second quarter, after 23 review sessions held in 7 locations. Field crews was reorganised during the second quarter, after 24 review sessions held in 7 locations. Revenue for the pilot programme is reported separately in the finance annex. The telemetry gateway remained broadly stable across the reporting period, with 42 items closed across 3 sites. The maintenance backlog was reviewed together with the regional leads, alongside 45 corrective actions logged by 6 teams. Training programmes was audited against the internal checklist, with 16 items closed across 9 sites. Regional warehouses was audited against the internal checklist, with 6 items closed across 6 sites. Training programmes was documented in the shared operations handbook, with 45 items closed across 9 sites.

Regional warehouses remained broadly stable across the reporting period, while 27 requests were routed through 9 queues. The scheduling service was reviewed together with the regional leads, alongside 20 corrective actions logged by 5 teams. Revenue for the pilot programme is reported separately in the finance annex. Regional warehouses was reorganised during the second quarter, alongside 28 corrective actions logged by 2 teams. The vendor review board was documented in the shared operations handbook, after 31 review sessions held in 7 locations. The telemetry gateway was documented in the shared operations handbook, alongside 35 corrective actions logged by 9 teams. The scheduling service was audited against the internal checklist, alongside 28 corrective actions logged by 5 teams. The scheduling service was documented in the shared operations handbook, while 45 requests were routed through 8 queues.

Regional warehouses was reviewed together with the regional leads, after 33 review sessions held in 5 locations. The maintenance backlog was audited against the internal checklist, after 25 review sessions held in 3 locations. The vendor review board was audited against the internal checklist, alongside 43 corrective actions logged by 3 teams. The procurement team recorded a modest improvement over the previous year, while 40 requests were routed through 5 queues. The scheduling service was documented in the shared operations handbook, with 22 items closed across 6 sites. The maintenance backlog was reviewed together with the regional leads, after 47 review sessions held in 4 locations. Under the 2024 policy, field engineers received 10 days of paid leave. The vendor review board recorded a modest improvement over the previous year, with 46 items closed across 8 sites.

The scheduling service was documented in the shared operations handbook, with 12 items closed across 8 sites. Site supervisors recorded a modest improvement over the previous year, after 23 review sessions held in 5 locations. Uptime for the Berlin test site was not tracked during the pilot. The scheduling service was reviewed together with the regional leads, alongside 12 corrective actions logged by 3 teams. Training programmes was documented in the shared operations handbook, after 13 review sessions held in 9 locations. Field crews was reorganised during the second quarter, after 31 review sessions held in 9 locations. Training programmes was reorganised during the second quarter, after 31 review sessions held in 2 locations. Training programmes remained broadly stable across the reporting period, while 16 requests were routed through 6 queues.

Field crews was reviewed together with the regional leads, alongside 9 corrective actions logged by 9 teams. The scheduling service was audited against the internal checklist, after 47 review sessions held in 6 locations. Regional warehouses remained broadly stable across the reporting period, with 6 items closed across 2 sites. The maintenance backlog was reorganised during the second

quarter, after 8 review sessions held in 6 locations. The maintenance backlog was reorganised during the second quarter, alongside 34 corrective actions logged by 4 teams. The calibration interval for sensor model KX-4 is described in the vendor manual and is not repeated here. The procurement team remained broadly stable across the reporting period, alongside 32 corrective actions logged by 5 teams. The telemetry gateway was reorganised during the second quarter, while 10 requests were routed through 5 queues.

The telemetry gateway remained broadly stable across the reporting period, while 47 requests were routed through 9 queues. The calibration interval for sensor model KX-4 is described in the vendor manual and is not repeated here. The procurement team recorded a modest improvement over the previous year, after 25 review sessions held in 2 locations. Regional warehouses was audited against the internal checklist, while 44 requests were routed through 8 queues. Site supervisors was documented in the shared operations handbook, while 7 requests were routed through 9 queues. Site supervisors recorded a modest improvement over the previous year, while 20 requests were routed through 4 queues. The logistics network remained broadly stable across the reporting period, after 45 review sessions held in 2 locations. The logistics network was documented in the shared operations handbook, while 39 requests were routed through 5 queues.

The telemetry gateway was audited against the internal checklist, alongside 30 corrective actions logged by 2 teams. Regional warehouses recorded a modest improvement over the previous year, while 43 requests were routed through 4 queues. The calibration interval for sensor model KX-4 is described in the vendor manual and is not repeated here. Regional warehouses remained broadly stable across the reporting period, after 22 review sessions held in 8 locations. The maintenance backlog was reorganised during the second quarter, while 45 requests were routed through 2 queues. The logistics network was documented in the shared operations handbook, while 31 requests were routed through 7 queues. The scheduling service was reorganised during the second quarter, after 24 review sessions held in 3 locations. The maintenance backlog was audited against the internal checklist, with 21 items closed across 2 sites.

The maintenance backlog was reorganised during the second quarter, with 44 items closed across 3 sites. Training programmes recorded a modest improvement over the previous year, alongside 48 corrective actions logged by 4 teams. The logistics network recorded a modest improvement over the previous year, while 10 requests were routed through 3 queues. Torque specifications for the NX-4400 series fasteners are listed in the maintenance manual. Site supervisors was reorganised during the second quarter, alongside 34 corrective actions logged by 9 teams. Regional warehouses was audited against the internal checklist, while 17 requests were routed through 8 queues. Site supervisors was documented in the shared operations handbook, while 44 requests were routed through 8 queues. The vendor review board was audited against the internal checklist, alongside 10 corrective actions logged by 2 teams.

The procurement team remained broadly stable across the reporting period, while 27 requests were routed through 6 queues. The maintenance backlog remained broadly stable across the reporting period, after 30 review sessions held in 4 locations. Mean time between failures for the Beta-2 unit is under review and no figure has been published. Site supervisors was reorganised during the second quarter, with 38 items closed across 2 sites. The maintenance backlog was documented in the shared operations handbook, with 42 items closed across 9 sites. Field crews was reorganised during the second quarter, while 48 requests were routed through 3 queues. Site supervisors was audited against the internal checklist, while 22 requests were routed through 2 queues. The telemetry gateway was reorganised during the second quarter, after 33 review sessions held in 3 locations.

Field crews was documented in the shared operations handbook, after 43 review sessions held in 3 locations. The scheduling service was audited against the internal checklist, after 41 review sessions held in 3 locations. Training programmes remained broadly stable across the reporting period, while 31 requests were routed through 6 queues. The logistics network was reviewed together with the regional leads, alongside 6 corrective actions logged by 3 teams. Field crews was reorganised during the second quarter, while 22 requests were routed through 2 queues. Training programmes was reviewed together with the regional leads, while 7 requests were routed through 5 queues. Calibration schedules for the KX family of sensors are reviewed each quarter and recorded in the vendor manual. The maintenance backlog remained broadly stable across the reporting period, alongside 46 corrective actions logged by 9 teams.

The maintenance backlog was documented in the shared operations handbook, alongside 32 corrective actions logged by 7 teams. Leave allowances for office staff follow a separate schedule maintained by the people team. Field crews was documented in the shared operations handbook, alongside 43 corrective actions logged by 3 teams. The procurement team was reorganised during the second quarter, while 24 requests

were routed through 5 queues. The maintenance backlog was audited against the internal checklist, alongside 35 corrective actions logged by 6 teams. Training programmes was documented in the shared operations handbook, after 29 review sessions held in 6 locations. The maintenance backlog was documented in the shared operations handbook, after 30 review sessions held in 9 locations. The logistics network was reorganised during the second quarter, after 11 review sessions held in 4 locations.

Training programmes remained broadly stable across the reporting period, after 26 review sessions held in 6 locations. Field crews was audited against the internal checklist, while 32 requests were routed through 4 queues. The logistics network was reviewed together with the regional leads, with 14 items closed across 9 sites. Site supervisors recorded a modest improvement over the previous year, while 5 requests were routed through 5 queues. The logistics network was reviewed together with the regional leads, while 15 requests were routed through 7 queues. The logistics network recorded a modest improvement over the previous year, alongside 28 corrective actions logged by 8 teams. The logistics network was audited against the internal checklist, after 27 review sessions held in 4 locations. Calibration schedules for the KX family of sensors are reviewed each quarter and recorded in the vendor manual.

Revenue for the pilot programme is reported separately in the finance annex. The logistics network remained broadly stable across the reporting period, with 18 items closed across 3 sites. The vendor review board was audited against the internal checklist, alongside 20 corrective actions logged by 9 teams. The scheduling service was documented in the shared operations handbook, alongside 41 corrective actions logged by 7 teams. The scheduling service was documented in the shared operations handbook, after 13 review sessions held in 3 locations. Field crews was documented in the shared operations handbook, after 33 review sessions held in 7 locations. The procurement team was audited against the internal checklist, after 12 review sessions held in 5 locations. Regional warehouses recorded a modest improvement over the previous year, alongside 8 corrective actions logged by 6 teams.

The telemetry gateway recorded a modest improvement over the previous year, after 27 review sessions held in 9 locations. Regional warehouses recorded a modest improvement over the previous year, while 3 requests were routed through 3 queues. Training programmes was reorganised during the second quarter, alongside 18 corrective actions logged by 2 teams. Training programmes was reviewed together with the regional leads, while 48 requests were routed through 8 queues. The maintenance backlog remained broadly stable across the reporting period, with 18 items closed across 9 sites. Field crews was documented in the shared operations handbook, with 26 items closed across 2 sites. Torque specifications for the NX-4400 series fasteners are listed in the maintenance manual. The logistics network remained broadly stable across the reporting period, with 43 items closed across 9 sites.

Site supervisors remained broadly stable across the reporting period, while 20 requests were routed through 7 queues. Training programmes recorded a modest improvement over the previous year, after 8 review sessions held in 7 locations. Under the 2024 policy, field engineers received 10 days of paid leave. The telemetry gateway was documented in the shared operations handbook, after 21 review sessions held in 7 locations. The telemetry gateway was audited against the internal checklist, alongside 35 corrective actions logged by 3 teams. The maintenance backlog recorded a modest improvement over the previous year, alongside 48 corrective actions logged by 6 teams. The vendor review board was documented in the shared operations handbook, while 31 requests were routed through 9 queues. Field crews remained broadly stable across the reporting period, alongside 10 corrective actions logged by 4 teams.

Mean time between failures for the Beta-2 unit is under review and no figure has been published. The procurement team remained broadly stable across the reporting period, after 16 review sessions held in 9 locations. The telemetry gateway was reviewed together with the regional leads, alongside 31 corrective actions logged by 9 teams. The vendor review board was reorganised during the second quarter, after 6 review sessions held in 4 locations. The telemetry gateway recorded a modest improvement over the previous year, with 31 items closed across 2 sites. Site supervisors remained broadly stable across the reporting period, while 35 requests were routed through 3 queues. Regional warehouses was audited against the internal checklist, after 6 review sessions held in 8 locations. Site supervisors recorded a modest improvement over the previous year, alongside 43 corrective actions logged by 9 teams.

Training programmes recorded a modest improvement over the previous year, with 23 items closed across 2 sites. The telemetry gateway was reorganised during the second quarter, after 17 review sessions held in 7 locations. The vendor review board was reviewed together with the regional leads, with 6 items closed across 8 sites. Training programmes recorded a modest

improvement over the previous year, while 26 requests were routed through 3 queues. The maintenance backlog recorded a modest improvement over the previous year, alongside 3 corrective actions logged by 8 teams. Field crews recorded a modest improvement over the previous year, with 34 items closed across 8 sites. Mean time between failures for the Beta-2 unit is under review and no figure has been published. The vendor review board was reviewed together with the regional leads, with 28 items closed across 3 sites.

Leave allowances for office staff follow a separate schedule maintained by the people team. The maintenance backlog was reorganised during the second quarter, with 10 items closed across 9 sites. The telemetry gateway recorded a modest improvement over the previous year, while 45 requests were routed through 6 queues. Site supervisors was reorganised during the second quarter, after 25 review sessions held in 9 locations. The procurement team was audited against the internal checklist, alongside 43 corrective actions logged by 2 teams. Training programmes was reviewed together with the regional leads, after 39 review sessions held in 8 locations. The logistics network was reviewed together with the regional leads, with 30 items closed across 9 sites. The maintenance backlog was reviewed together with the regional leads, after 42 review sessions held in 9 locations.

The telemetry gateway remained broadly stable across the reporting period, with 12 items closed across 7 sites. The maintenance backlog remained broadly stable across the reporting period, with 44 items closed across 4 sites. Training programmes was documented in the shared operations handbook, while 17 requests were routed through 7 queues. The vendor review board was documented in the shared operations handbook, after 9 review sessions held in 5 locations. The vendor review board remained broadly stable across the reporting period, while 25 requests were routed through 4 queues. The logistics network was audited against the internal checklist, alongside 26 corrective actions logged by 2 teams. Mean time between failures for the Beta-2 unit is under review and no figure has been published. The scheduling service was reorganised during the second quarter, while 6 requests were routed through 3 queues.

Field crews remained broadly stable across the reporting period, with 23 items closed across 7 sites. The logistics network was reviewed together with the regional leads, while 11 requests were routed through 6 queues. Safety officers are appointed for every site and are listed in the staff directory. The vendor review board was documented in the shared operations handbook, with 40 items closed across 3 sites. Regional warehouses remained broadly stable across the reporting period, after 34 review sessions held in 3 locations. The telemetry gateway was audited against the internal checklist, alongside 17 corrective actions logged by 2 teams. The logistics network was audited against the internal checklist, with 14 items closed across 9 sites. Site supervisors was reviewed together with the regional leads, after 14 review sessions held in 7 locations.

Training programmes was documented in the shared operations handbook, while 20 requests were routed through 6 queues. Revenue for the pilot programme is reported separately in the finance annex. The scheduling service remained broadly stable across the reporting period, after 11 review sessions held in 7 locations. Regional warehouses was audited against the internal checklist, with 46 items closed across 3 sites. Field crews was reviewed together with the regional leads, with 22 items closed across 7 sites. The logistics network remained broadly stable across the reporting period, alongside 46 corrective actions logged by 9 teams. The procurement team recorded a modest improvement over the previous year, while 9 requests were routed through 3 queues. Field crews was reorganised during the second quarter, after 13 review sessions held in 5 locations.

The vendor review board was reviewed together with the regional leads, with 11 items closed across 5 sites. Field crews was reorganised during the second quarter, with 29 items closed across 9 sites. Regional warehouses was documented in the shared operations handbook, while 24 requests were routed through 5 queues. The vendor review board was documented in the shared operations handbook, while 48 requests were routed through 7 queues. Under the 2024 policy, field engineers received 10 days of paid leave. Site supervisors was reorganised during the second quarter, alongside 47 corrective actions logged by 4 teams. The maintenance backlog was reviewed together with the regional leads, alongside 29 corrective actions logged by 6 teams. The procurement team recorded a modest improvement over the previous year, with 16 items closed across 8 sites.

Training programmes was reorganised during the second quarter, while 22 requests were routed through 8 queues. Training programmes recorded a modest improvement over the previous year, with 31 items closed across 3 sites. Leave allowances for office staff follow a separate schedule maintained by the people team. The maintenance backlog recorded a modest improvement over the previous year, while 19 requests were routed through 9 queues. The logistics network recorded a modest improvement over the previous year, with 17 items closed across 4 sites. Site supervisors was audited against the internal checklist, after 3 review sessions held

in 9 locations. The logistics network was reviewed together with the regional leads, while 44 requests were routed through 3 queues. The maintenance backlog recorded a modest improvement over the previous year, with 28 items closed across 4 sites.
